COUGHLIN'S

PATENT FROST and FIRE PROOF

IRON FENCE POSTS!

For Barbed and other Wire Fences, patented in the United States and Canada, the Bos Cheapest, and Most Durable Fence Post ever invented or used, having no complications, doing away with the digging of Post Holes, &c.

The above cut shows a section of Fence with 100 feet span, taken from photograph. Also Post adjusted in ground, post entering ground, and bolt wire attachment, (all patented.)

Post adjusted in ground, post entering ground, and bolt wire attachment, (all patented.) The entire length of the post is \$1\$, with two adjustable feet at the lower end,20 inches by 4 inches, making it impossible to be raised from position by the freet or otherwise, except by durging out the entire depth of the post and removing all of the front to feet. The Post is driven into the ground \$3\$ feet deep, with a mallet, beetle or sledge, (with a wooden cap on top of the post for \$1000 pt of the post for \$1000 pt of the post of \$1000 pt of the post of \$1000 pt of the post while digging one picket hole. Those josts stand a straining present of \$1000 pt of the post with a fonce \$4\$ ft. high with XD it, span between posts, as erected for Win. Ellis, Superintendens of the Welland Canal, on his farm adjoining Present, Ont.; also at the South Grenville Agricultural Show Fair, and at the Toronto Exhibition, 1880.

Itsiroad Companies, County Councilis, Toll Read Companies, Farmors, and others requiring Fences imperiabile and indestructible by fire, winds on the part for generations, accumulating no snow-drift, or depositories for woods, &c., and no waste of land on a placing a fire and burglar proof safe about every man's domain, allowing him praces of mind and rest of body, from breachy and unruly stock, bush fires, garden and fruit thetes; siae raids on sheep and other stock by dog, welves or other wiid authunts, even the house cat or for cannot pass through it when properly erected on this post, and every owner of the land should erect these Fences at once.

TO THE PUBLIC.

He aware of Boyns Imitations of Iron Fonce Posts, requiring the digging of tronches, same no cross wills to old fonce post, that are only 2 inches b, 6 inches under the ground, and held by a wooden pin or irou spike, with the wires fastened to the posts by wrapping a small wire around posts with no other attachments to keep it up to its place, but allowing the wires through working by the winds to slip down to the ground. The small wire rusts off in a short time as in twisting the gairanising is broken allo ving damp to penetrate and rust it off. It after requires a kit of tools and constant requiring to keep it in order. Either man or least can show or cant reds of this fence and posts over, while the Coughlin Patent Posts stand a unceaure of several tous in either direction sufficient obreak the posts without moving the bottom or cauting it from appropriate ular; also the wires are belied to the side of the posts. this bot fastening is also patented with post, making it impossible to sag should a wire by accident be broken or cut by evil-discosed parties, excepting the span injured which no other posts shown or invented have the power to resist.

In comparing the actual cost of material for the following fences, I have consulted many farances and others who all claim that I have underrated the actual cost of Rail and Board Fonces:

farmore and of Board Fouces:

I will sell County or Township rights very cheap to enterprising mon who wish to build Fences, and furnish them Posts, Wire, &c., at the very lowest cash prices; will slee soil rights to farmers at \$5.00 per 100 acres, farmers to build fonce themselves and I will surnish all materials of best quality at wholesale prices. Fences will only cost 73 cents per red for material, \$ to 4 men will build one mile per day. By forwarding orders thus addressed P Caughtin, Prescott, Ont, they will receive prompt attention. One pound of wire builds 3 feet of sence 5 wires high, and 3 men can put up 4 miles of side-line fonce par day, with a single horse and wagen to lay free wires along the ground at once and strain wires every 500 to 600 feet with rope and double pulley, costing about 60 conts, for the whole. After straining wire so along and set on hooks of boits of other posts, and tighten up with a small wroach. This ionce is undergoing a test this winter with spans of five wires high, 200, 200, 175, 150, 125, 75, 00 and 25 feet, the extreme cold weather does not effect it the slightest, all was put up per feetly tight and still romain so, with no breakars or other dotect.

CGENUINE

Rose-Comb White Leghorn

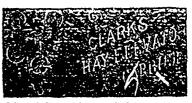

C. F. BARBER, - Breeder.

This variety of Leghorn is rapidly taking the place of the old style White Leghorn, on account of atvantage gained in having the Rose-Comb. They are pure white, graceful and handsome; non-setters and probably the best Layers; eggs, large and fine. They are hardy and healthy, mature early, and begin laying in early fall. In fine they possess all good points connected with the (White) Leghorn blood.

Clark's Hay Elevator, and Carrier.

WHAT OUR CARRIER HAS DONE.

Nincteen leads of hay weighing over a ten each have been unleaded in three hours, each lead being pitched off at four forks full in from two to four minutes. We have testimonials from reliable harmors stating that they have unleaded 2.50 points of hay in less than two minutes. Hay can be pitched into the barn from the gable end as well as from the bay as well as into it.

FOR STACKING we granules that our

FOR STACKING we guarantee that our Carrier has no equal. In the far West it has been used quite extensively with the best possible results.

ANY FORK can be used with the Car-rier, and as most every farming section has its favorite fork, we do not presume to say which is best.

which is bost.

THE OARRIER adjusts itself to any publication on the tracks so that it makes no difference whether the lead stand under the track or twenty feet away. This is an advantage possessed by fow Carriers, and is a very essential one if you wish to fill the barn floor with hay or grain.

Our Offer.

Upon writton application we will send one of our Hay Carriers on trial, to any responsible farmer in the United States or Canada, with the undentanding that if it performs its work fully up to the warranty, he shall pay us our advertised price for it. If it does not perform according to contract, it may be returned to us, we paying the return freight charges.

Price of Hay Carrier, Complete, \$15.00.

Reliable agents wanted in ever farming community in Canada and the United States. For further particulars address
