OUR RETAIL ESTABLISHMENTS. THE EXTENSIVE CLOTHING HOUSE OF J. G. KENNEDY & CO.

' It has been the aim of the Commercial Review, in the exhibits we have made of the various branches

of industry with which our city abounds, to mention only those establishment that can be fairly called representatives of their trade. And while as a general rule we have taken only those which do a wholsale business, we have not overlooked those in the retail trade which, from the magnitude of their operations, deserve especial mention. Within the last few years a great change has taken place in the clothing trade. Ready-made goods are now produced in as fine fabrics and as good styles and make as are the most of custom-made suits. In fact there are many of our best citizens who buy ready-made clothing entirely, and none of their acquaintances are aware that their stylish suit do not come from a fashionable tailor. Especially has this feature of the trade been apparent during the hard times and when economy was a necessity. The most extensive retail clothing house in this city is that of Messrs. J. G. Kennedy & Co, No. 31 St. Lawrence st. We had the pleasure of visiting this establishment a few days since, and we can safely assert that a larger finer or more stylish stock of clothing would be hard to find. The building occupied by them is four stories in height and is filled to repletion with every class of goods in the clothing line, comprising men's boys', and youths' ready-made clothing n every variety, Canadian and Scotch tweeds, cassimeres, doeskins, &c. On the first floor is the stock of over coats, suits, &c., in the latest styles and makes, and sold at prices to suit the most exacting. Indeed it would be difficult to fied a customer who could not be suited in his department The measuring and cuiting department is also on this floor. Here the finest custom-made clothing can be obtained at minimum prices. The 3rd and 4th floors are devoted to clothing of every description. They carry at all times a fine stock of tweeds, broadcloths, &c, &c., in bales. Their clothing for excellence of quality and first class workmanship and finish cannot be surpassed. We commend any of our readers who really want superior, well fitting, stylish, and durable custom or ready-made garments at bottom prices to pay this house a visit they are sure to be suited by going to this fine

NATURALISTS' PORTFOLIO.

APPLES.-It is stated that by a careful analysis it has been found that apples contain a larger amount of phosphorus, or brain food, than any other fruit or vegetable, and on this account they are very important to sedentary men who work with their brain rather than muscles. They also contain the acids which are needed every day, especially for sedentary men, the action of whose liver is sluggish to eliminate effete matters, which, if retained in the system, produce inaction of the brain, and indeed of the whole system, causing jaundice, sleepiness, scurvy, and troublesome diseases of the skin.

MIGNONETTE.-Mignonette ("little darling") is a universal favourite with all lovers of flowers, including our honey-bees Linnaus compared its perfume to ambrosia. A native of Egypt and Northern Africa, it has long been cultivated in France and England. In France it is called by its Latin name, Reseda adorata, which seems not a little singular, while with us its French name is the popular one. Although regarded as an annual, it can be made to last several years if placed in a greenhouse during the winter and properly trained. Its delightfully fragrant flowers will then bloom through the year. A prominent bee-keeper estimates that one acre of the common mignonette will supply with nectar the bees of a hundred hives.

ANTS .- Mr. McCook brought recently before the Academy of Natural Science of Philadelphia an account of his investigations on formica rofa. He finds that ants descending the tree-paths, with abdomens swollen with honey-dew, are arrested at the foot of the tress by workers from the ant-hill. The descending ant places its mouth in contact with that of the food-seeker, the two being reared on hind legs. Frequently, two or three of its fellows are thus fed in succession by one ant, mostly complacently, but sometimes only on compulsion. Mr McCook made many experiments, which led to the conclusion that there is complete amity between the ants of a large field, embracing some sixteen hundred hills and many millions of creatures. Insects from hills widely separated always fraternized completely. A number of ants from various hills were placed in an artificial nest, and harmoniously Corner Victoria Square and Craig Street. | built galleries and jointly cared for the cacoons.

> FIGS AND SNAKES .- A farmer living on the west side of the Ohio River, in walking about his farm, discovered a nest of rattlesnakes in the hollow bark of an old tree, about which several pieces of rock lay scattered. Having heard that pigs were hostile to snakes of all kinds, and not caring to attack the nest himself, he thought he would try the experiment and see a fight. He drove several pigs into the vicinity of the nest, and watched the result The pigs soon seemed to scent the reptiles, and commenced to root eagerly about the spot. In an instant, half a dozen of the vicious serpents emerged from their hiding place to attack the intruders, who manifested a zealous disposition to give battle. A snake would rear itself to the height of the back of the pig, shake its rattle, and plunge its fangs into the animal with lightning like celerity, and then dart away, pursued by the the pig, who dex-terously received the sting upon the fleshy part of the jaw. Over and over again, this would be re-peated until the pig got his fore-foot upon the snake when he would deliberately tip the reptile in twain and then devour him. This slaughter continued until all the snakes were disposed of, when the pigs grunting contentedly, and without any signs of being disturbed, waddled off in search of other provender. The eye-witness of this singular contest, which was not without its exciting features, declares himself convinced that a pig is impervious to the poisonous bite of any kind of serpent.

CHANGE OF CLIMATE IN EUROPE -A Swedish paper publishes an interesting article under the heading, Why is the Climate in Europe Growing Colder ?" The articles states that in the Bay of Komenok near Koma, in Greenland, fossil and very chareter-ENGINEERS, FOUNDERS AND IRON BOAT istic remains of palm and other trees have been discovered lately, which tends to show that in these parts formerly a rich vegetation must have existed. But the ice period of geologists urrived, and, as a consequence of the decreasing temperature, this fine vegetation was covered with ice and snow This sinking in the temperature, which moved in a southerly direction, as can be proved by geological data, that is, the discovery of fossil plants of certain species, seems to be going on in our days also During the the last few years, the ice has increased far toward the south; thus between Greenland and the Artic Sea colossal masses of ice have accumulated. On European coasts navigators now frequently find ice in satisfaces where it never existed before during the summer months, and the cold reigning upon the Scandinavian peninsula this summer results from the masses of ice which are floating in the region where the Gulf Stream bends towards our coasts. This is a repetition of the observations made in the cold summer of 1865. The unaccustomed vicinity of these masses of ice has rendered the climate of Iceland so cold that corn no longer ripens there, and the Icelanders, in fear of a coming famine and icy climate, began to found a new home in North America.

TRIED BY A BEAR.-Kittie Wayner, a child of thirteen years on a visit from her home in Pittsburgh to an uncle who lives near Porter's Lake, was recently lost in the woods for several days, and when found was clinging to the top of a small tree. She told the following story of her adventures. She started after her uncle's cows, but, they not being where she usually found them, she wandered off, and going further than she meant, she became lost. She travelled until late in the night, when, becoming exhausted, she sat down by a tree and fell asleep. When she a voke, the sun was shining brightly. She again set out, thinking she would find her way home, but she had become so frightened and bewildered that, after walking all day, she found herself about the same place she was the previous night. As the shades of night began to full, the little wanderer realized her situation and cried bitterly. Being almost starved, and her feet having become sore from walking, she gathered some dried leaves, and, making a bed, laid herself upon it, and was soon fast asloep. She said her sleep was interrupted by the most horrible dreams, and several times she was awakened by strange noises, which she thought must have been made by wild animals. When she awoke in the morning, it was just getting light, and, brushing the leaves from her clothing, she again started. She had gone only a short distance, when she heard a noise in the bushes behind her, and, looking back discovered a huge black bear following in her trail. She scr amed at the top of her voice, and ran with all her might. But the bear rapidly gained on her, and, knowing she must soon be overtaken, she resolved to climb a tree. The bear reached the tree as the frightened girl was ascending it, and, standing upon his hind legs, made a blow at her, fastening its claws into her skirts. She maintained her hold, and after repeated efforts succeeded in freeing herself, and climbed beyond the animal's reach. bear remained about the tree for some little time vainly endeavoring to ascend it, owing to its small circumference, and had disappeared into the thicket only a short time be before the rescuers arSTOVES, &c.
