TEKNICA is a leading edge high-technology company which provides the oil and gas industry with fully integrated consulting services and software products for geological and geophysical interpretation, seismic processing and inversion, petrophysical analysis and reservoir engineering. Teknica has taken its consulting expertise and software products to over 50 countries. The strength of Teknica's consulting services is based on the use of teams of specialists from relevant disciplines: Geology, Geophysics, Petrophysics, Reservoir Engineering.

Optimum solutions are developed for subsurface problems by integrating the skills of all team members. Projects undertaken range from basin analysis to precise reservoir modelling of complex fields. Teknica's patented Seislog seismic inversion method is a key element of many reservoir description studies.

One of Teknica's specialities is Technology Transfer. Over its 20 year history, Teknica has trained hundreds of professionals throughout the world. Important aspects of all major projects include: "Hands On" industry training; Courses and Seminars, Teknica's offices or on site; Programs customized to match requirements

Mr. Kim Head
Manager of Training
