

WYETH'S LIQUID MALT EXTRACT,

Containing all the nutrient properties of Malt, with the least possible amount of Alcohol.

Fermented liquids prepared from malted grain have been in use from the earliest times, and have always been highly prized for their strengthening and nutritive properties. Hitherto, however, the large amount of alcohol in proportion to nutritious matter contained in the malt liquors of commerce, has been a serious objection to their use in many of the various forms of dyspeptic maladies, resulting from mal-nutrition, for which malt preparations are peculiarly adapted.

Recognizing this fact, we have, after numerous experiments, succeeded in preparing a Liquid Malt Extract possessing all the advantages of malt liquors, while it is not open to the objections so frequently and justly urged against their use.

It is especially adapted for administration to nursing mothers and children, to patients suffering from nervous exhaustion, chilliness, etc., and particularly to those unable to digest starchy food.

The diastase contained in our preparation of malt renders such foods immediately soluble, by converting the starch into malt-sugar and dextrine, in which form they can be readily assimilated by the system, thus creating animal heat, and aiding the formation of fat.

Probably its greatest value is as a beverage, during lactation, as it not only supplies strength to meet the unusual demands upon the system at that time, but improves the quality of the milk, by increasing the amount of sugar and phosphates, nourishing the infant and sustaining the mother at the same time.

In cases of consumptive tendencies, and in the latter stages of phthisis, it will be found to improve the appetite, and promote the assimilation of carbonaceous food, supplying the waste of elementary matter, fortifying the system, and enabling it to better resist the undermining effects of the disease. It also acts as a roborant in all cases of debility, and is a most valuable addition to the tonic and restorative treatment required in convalescence.

Physicians will find in many cases where Cod Liver Oil and Cream are inadmissible from want of digestive power, that the most susceptible patient can tolerate both, when given in conjunction with this liquid malt, if administered in small doses, gradually increased, as the tone of the stomach is strengthened.

As it contains less than four per cent. of alcohol, it can be given to invalids, children, etc., without danger of the secondary depressant effect so frequently experienced from the administration of spirituous remedies; the ordinary dose of a wineglassful representing less than forty grains of alcohol, and over one hundred and twenty-five grains of nutritious extractive matter, rich in diastase, preserved by our peculiar process of preparation; while in the malt liquors it is rendered completely inert by the boiling to which they are subjected during manufacture.

We claim that our Liquid Malt Extract will be found to contain all the nutritive virtues of the best malt liquors in a higher degree than any of the largely sold liquid malts with which we have compared it, while it is free from the stimulating effect which invariably follows their administration. Pint bottles, \$4.50 per dozen.
