GRAIN MEN DE GREAT BRITAIN FORSEE AMPLE SUPPLY IN 1915

VOL. XXX. NO. 50

omhall Estimates That Available Yields Next Sea sen Will Total 744,000,000 Bushels—Govern-ment's Participation in Situation Not Realized By Trade There,

Grain authorities in Great Britain seem to be of the nion that the Government would have done better if it had left to the usual trade agencies the supply ing of breadstuffs, rather than to have commandeered the harvests as was done in India and Australia Broomhall, in his weekly review of conditions for the orn Trade News of Liverpool, under date of June 15,

"We still believe it would have been the better policy if the Government had left the trade alone to regular supply at as low a price as is economically possible under the varying conditions of the cost of freights, finance, insurance and the price of labor."

Regarding the fuutre supply of the British market. ame survey concludes:-

The outlook at the present time is reassuring. with normal weather conditions during the ensuing six weeks, there is a promise of abundance for next ason, and even if the present prospects are not fully realized in North America and Russia, there seems to be no likelihood of a scarcity. The reof the Dardanelles, which is not likely to be eferred very much longer, will make one important difference between next season and the one now draw ing to a close. Canada will almost certainly produce than she did last summer. India still has the bulk of her last crop to ship, and most likely will omething to spare from her next harvest, which will be available for shipment in the ensuing British sereal year. Australia, too, will most likely be a contributor to our requirements next season

"The quantity of wheat and flour which the chief exporting countries will have on sale next season, compared with the quantity shipped this season. August 1, 1914, to July 31, 1915 (the last seven weeks esti

	mated), is given as follows:

the criticism that the figure it produces is too high, and in referring to the Economist estimate, Mr. Mallet pointed out that some deductions should be made in comparing it with his own. Firstly, the £1,000 millions for furnitures hould be deducted from both estimates as not being productive of income. Secondary the foreground of the firstly that the firstly the firstly that the firstly the firstly that the practice of making gifts inter vivos has no effect on the calculation of living property, and questions whether the discrepancy of £2,000 millions can be explained by gifts before death.

It is difficult to say which of the two methods are the calculation of living property and questions whether the discrepancy of £2,000 millions can be explained by gifts before death. estimates as not being productive of income. Seconly, Government and local property should be deducted from the Economist total, as not being property in private hands. Moreover, he sugests that there is a large amount of income included which is not received by individuals, but is in the hands of municipalities, such as gas, waterworks, investments of mutual life and fire insurance companies with their reserve funds, trust funds, clubs, etc., say 60 mill-

ons. This, capitalized at 25 years' purchase, gives

£1.300 millions. Under these two heads a total of roughly. £2,900 millions may be deducted from our Thus a total of £3.000 millions may be deducted from our £14,000 millions, reducing it to £11,000 millions, and from Mr. Mallet's estate duty figure £1.000 millions, reducing it to £3,000 millions, There is thus a disparity of, roughly, £2,000 millions. The chief criticisms of Mr. Mallet's estimate in Total £346,053 £346.808 £359.215 the past have been that estates are undervalued for probate, and that considerable sums pass inter vi-Multiplied by 28 . 9.689,500 9.710.624 10.058,000

Thus there is a discrepancy of some 4.000 million the recent increases in the death duties. Mr. pounds between our estimate and that of Mr. Mallet. however, argues at considerable length. But Sir Robert Giffen's method has always been open to criticism that the figure it produces is too high, and the practice of making gifts inter vivos has no effcet

DRYING OF POTATOES MEANS GREAT SAVING

Many German Processes Have Been Secured and These Could Profititably be Adopted Here

EXPERIMENTS SATISFACTORY

Cheap Grade of Labor Could Be Employed in the Preparation of the Potatoes, Thus Reducing the Cost to a Very Considerable Extent.

they, like apples, are made up largely of moisture, yet they are shipped (2007). This shows that the great bulk of the sa they like apples, are made up largely of moisture, yet they are shipped from place to place in barrels or fishing industry is the production of halibut. The bags without thinking that out of every 100 pounds of catch of this variety of food fish on the Pacific potatoes, 80 pounds are water, says the Farmer's Ad. Coast in 1914 was approximately 65,000,000 pounds with an aggregate value of \$2,600,000. The market value with an aggregate value of \$2,600,000. The market value of halibut landed in British Columbia last year was \$1,734,200 pounds, or more than one-half of the ada, and to distant countries by the movement of total catch in the Coast waters. It is because the potatoes. It has meant earnings for the transportation companies, but it is remarkable how much money port of British Columbia that halibut can be marketed has been spent on the shipment of water to localities in Eastern cities sooner than fish of the same class which have never been heard to complain about an inadequate precipitation.

> About 15 years ago in Germany someone con-ceived the idea of evaporating potatoes. Since that time the production of potatoes in Germany has intime the production of potatoes in Germany has been experienced by 10 per cent, and now the evaporated or flaked potato can be bought at any grocery store in that country. Potatoes commonly contain about 80 tons of fish meal, fertilizer and whalebone. These per cent, of water, but through the operation of drying and flaking it is easily reduced to 15 per cent. in British Columbia waters. This elimination of 65 per cent. of moisture would mean an immense saving in the handling of a potato rop, and they could be preserved from year to year. crop, and they could be preserved from year to year, thus standardizing prices and preventing waste, such that they have been smaller as Greenwood, B.C., in a smaller at Greenwood, B.C., in a as resulted last year.

To our knowledge Canada has not experimented with this process, but at Wye, in the United Kingom, considerable experimental work has been carried on, and they pronounce the "hot air system" of dry-

The potato is first sliced, then put into cold water ing. six minutes, and then subjected to a current of hot results with other vegetables.

Bilished by the Department of Trade and Commerce, of course, from what would obtain in Canada, yet it is this process of drying potatoes is being discussed, altogether likely that a cheap grade of labor could chiefly from information gained in Germany during be employed in the preparation of potatoes, thus re-recent years. As stated in these bulletins, the cost during the cost considerably. and that the plant operate for 150 days, the total system.

VALUE OF COAST FISHERIES \$60,000,000 FOR YEAR 1914

British Columbia Easily Claims First Position—Total Value of Salmon Output \$38,622,000, of Which British Columbia's Share Was \$10,243,670.

It has been estimated that the value of the product of the Pacific Coast fisheries for the year 1914 was approximately \$60,000,000. Of this amount British Columbia is credited with more than \$11,000,000. The value of the output of the salmon canneries on the Coast for the last year was \$38,622,000, and the total value of salmon marketed from the British Columbia catch was \$10,243,670. This was divided as follows: Used in fresh state, \$1,491,419; canned, \$7,743,399; salted, dry, \$645,450; mild cured, \$215,386, and smoked, \$148,025. This shows that the great bulk of the sal-

taken from Atlantic Coast waters.

Other fish caught in British Columbia waters include herring and codfish and there are a number of About 15 years ago in Germany someone con- whaling statons on the Pacific Coast, four of which
