

# MARCY ROLLER MILL

**T**HE Marcy Roller Mill represents a high development in grinding machinery and in this respect is in a class with the Marcy Ball Mill.

The open end feature, through which the conditions within the mill may be observed while running, brings about low cost of operation.

Rods or rollers can be used in a tube mill, but for the best results, **bent and broken rods must be removed.**

High efficiency in the roller mill is obtained by the low pulp line as in the Marcy Ball Mill.

Thirty six large size Marcy Roller Mills are now being manufactured for one of the large mining corporations of the Southwest.

*We will be glad to advise on your crushing problems*
