J. N. Chute expects in the near future to see practically the whole apple yield of the Valley marketed through co-operative organization. From this system he expects a gain to the growers of twelve cents and a half in the packing and an equal amount in freight rates. This is twenty-five cents a barrel and on an export of 700,000 barrels of 1909 would mean a saving of \$175,000. This is a nice bonus to distribute among the farmers of the Valley and the amount will grow with the rapidly increasing fruit production. — Outlook.

The New Queen of the Dairy

Over Seven Tons of Milk and Over Half a Ton of Butter in One Year.

Another world's record has been broken. The new queen of the dairy is a beautiful Jersey cow named Sophie 19th of Hood Farm, owned and tested at Hood Farm, Lowell (Mass.) She is the champion Jersey for milk and butter fat production of cows between four and five years of age.

During the twelve months ending Dec. 31, 1910, on a test authenticated by the Massachusetts Agricultural College under the rules of the American Jersey Cattle Club, Sophie 19th of Hood Farm gave 14,373 pounds 3 ounces milk, testing 1,005 pounds 11 ounces butter or over half a ton. An accurate account was kept of her feed, and her milk sold at 10c. per quart made a profit of \$365.22.

The United States Department of Agriculture's estimate in round numbers of the wealth produced each year by the 32,000,000 cows in the United States is \$800,000,000, or an average profit of \$36.36 per cow. If more attention was paid to feeding and breeding it should be easy to increase the average profit cow to at least one-tenth of the profit made by Sophie 19th of Hood Farm, which would raise the total to \$1,240,000,000, an increase of \$440,000,000.
