

WHY YOU SHOULD SPECIFY EMPIRE RADIATOR VALVES

1st—The metal used is made up to special chemical analysis. We have our *own* smelting plant with our *own* chemical laboratory and make our *own* ingot.

2nd—Our foundry is equipped with the best of modern moulding machines which ensure symmetrical castings.

3rd—In our finishing room we have steel templates of all the standard threads, etc., and foremen and inspectors are constantly on the alert to see that all tools are adjusted to these standards.

4th—In our plating department, by a series of electric baths, hand-scrubbing, etc., all traces of grease are thoroughly removed before plating, giving a nickel deposit of the brightest quality and which will last a lifetime.

5th—All our valves are tested under 100 lbs. hydraulic pressure before leaving the factory.

6th—We are the largest manufacturers of plumbers' brass goods in the Dominion and are in the best position to give you prompt deliveries.
