Wilson Box Co.

One of the important industries of Saint John is that of the Wilson Box Company, where 68 hands are kept busy all the time filling orders for their goods, which go to all parts of the world.

Their plant is located in the Parish of Lancaster, just beyond Pairville station, and is an ideal location for their business. The plant and yard occupy about 12 acres, and there is half a mile of railway siding in the yard to facilitate the work of handling lumber and goods.

The company was organized in 1910 and was re-organized just recently. At the present time Fred L. Roderick is president and Alex. Wilson vice-president of the company.

They supply a number of local concerns with all sizes of wooden boxes for shipping their goods, and ship shooks, macaroni and banana boxes to all parts of the world. They are now putting on the market a standard crate for potatoes, the latest addition to their many lines of goods manufactured.

The "Made in Saint John" section will be a duplicate of their Wembley exhibit, for which they were awarded a certificate of honor. At the present time Mr. Wilson is in the south making new connections there in anticipation of the ratification of the commercial treaty with the British West Indies.

George E. Holder

For nearly half a century the name of George E. Holder has been known in the city in the manufacture of sails and canvas goods. The business was started in the days of wooden ship-building here and at first they confined their energies to the making of sails for the clippers that bore the name of

Saint John Desk Co.

The Saint John Desk Company operates a busy manufacturing plant, located at 274 Pitt street, and specializes in the production of school desks, showcases and office furniture. They have turned out some exceptionally fine work, and it is their boast that in the manufacture of store and office requirement they can equal any manufacturer in Canada. At all times the company is pleased to hear from merchants who are making alterations to their business premises, and are ready to submit quotations at short notice. Their plant is near the Saint John Exhibition grounds, and in the Made-in-Saint John exhibit will be found a display of goods manufactured by this company.

McCready & Son

Starting in Adelaide road in 1885, McCready & Son, Ltd., have been supplying first grade pickles and spirit white vinegar to the people of the Maritime Provinces for 42 years, using in their manufacturing all-Canadian materials and giving their customers all-Canadian products.

The company was founded by the late J. T. McCready. The business was first situated in Adelaide road, but moved 25 years ago to its present site in Portland street. At one time the company pretty well covered the Maritime Provinces and Quebec with its manufactures, but of late years more attention has been devoted to the Maritime business. The materials used in making McCready pickles are all made or grown in the Dominion, the cucumbers and cauliflowers coming from the Saint John River Valley.

D. Magee's Sons, Ltd.

Keeping in line with business conditions and changing stock and programs to meet changed conditions, the firm of D. Magee's Sons, under its present name and old name, has been providing the discriminating dresser in Saint John with hats, caps and furs since 1858.

The business was established in that year by the late David Magee, father of the present members of the firm. D. Magee & Co. in a small store in Germain street. Later he moved to King street and occupied part of the site where Oak Hall now stands. In 1881 the present name of D. Magee's Sons was adopted and the business was transferred to a small shop in Market Square on part of the site of the present Canada Permanent building. The store it was removed to its present stand in King street.

In the early days of the business the manufacture of cloth caps and silk hats was a very important part of the firm's activities and the fur department was a minor item. The making of caps was discontinued as this branch of headgear was extensively exploited by large firms making it an exclusive business. The silk hat manufacture gradually diminished and was finally discontinued owing to the lack of demand for the once popular form of headgear. The sale of men's headgear, including especially hats and caps of the better grades, increased greatly during the same time, however, and the firm is now carrying a line of men's furnishings of the same grade as the headgear.

In the meantime, the fur department developed in a far greater proportion than the hat and cap manufacturing diminished and, at present, the greater part of the time being devoted to this branch of the business.

H. Mont Jones, Ltd.

During the last few years a change has taken place in the fur business which has not been realized by the public. Muffs—those cozy little things—have gone entirely out of style. The small, comfortable, close fitting hat has been relegated to the past. As for the muff and scarf which were in demand only a few years ago and which constituted a large portion of the volume of fur sales are no longer asked for. The fur choker is the thing today for neckwear. It may be made from one two or three skins, has fur on both sides and is finished in the animal shape, that is, with heads, tails and paws. The fox pelts gathered from all parts of the world are perhaps the most popular. With all the natural colors may be found, dyed in almost any shade desired. Other furs used for chokers are mink, marten, sable, squirrel, fisher, etc.

The disappearance of the muff scarf and cape has brought an ever increasing desire for the fur coat and with it has come an increased demand on the furrier to produce something different. As the furrier has not the knowledge to produce new species of animals he has by his art and skill conceived new methods of working the pelts. Properly handled, two skins originally exactly alike, may be so cut and sewed to produce two articles entirely different in appearance.

The "Made in Saint John" exhibit of H. Mont Jones Ltd. is designed to show in a small way an example of the furrier's art and at their fur parlors, 92 King street many most attractive models in all the most popular furs are on display.

Murray & Gregory, Ltd.
This firm has been doing business under the present firm name since 1901 but was originally established in 1867. They manufacture spruce and pine lumber for the British and West India markets.

In 1904 their woodworking factory began operating and two years later their glassworks was added for the manufacture of art glass, level plates and mirrors for the building trade, and is now the only plant of its kind in New Brunswick. Today, in addition to providing glass of all kinds for building, they have a large business in the replacement of automobile glass.

In their woodworking factory, house finish in different woods, doors, sashes, cabinets, office, church and shop fittings are made. Beaver board, hardwood flooring, roofing, lime, cement, brick and paint are other lines carried by them. They keep up to the times and anyone building a home is advised to get in communication with this progressive firm. The latest addition to their business is the handling of B. C. fir timbers in sizes too large to get from our native spruce. Their slogan is "Everything in Wood and Glass for Building."

A. F. Burditt
A. F. Burditt, 156 Queen street, Saint John, is well known to the grocery trade as a manufacturer of pure marmalades. The marmalade manufactured by Mr. Burditt is produced from only the best fruits and pure sugar, and possesses a distinctive flavor found only in home-made marmalades. Local grocers state that this marmalade is a great favorite with many of their customers.

Safe Milk

"Do Parents Realize What This Means to Them?"

If the records were compiled showing the number of children who have died from diseases contracted through drinking raw milk the number would be appalling.

The M. H. O. of New York City recently stated that since pasteurization of milk was made compulsory, not one epidemic has been traceable to milk, while previous to compulsory pasteurization such epidemics were of frequent occurrence.

Standard Milk is Pasteurized in Glass-lined Pasteurizers, the most modern equipment made, therefore the work is scientifically done.

Twenty-four different wagons distribute Standard milk to all parts of the city. If you are not getting it, it is your own fault.

Phone Us, and have Standard Milk, Cream, and Butter delivered to your home.
