Better turn over a new leaf and try the I. H. C. Cream Harvester way. That means you'll get all the cream—and you can't do that by handskimming. Every morning and evening you are feeding good cream or butter-fat to your calves. That butter-fat is worth 25 cents a pound and upwards. Can you afford such high-priced feed for the calves, pigs and chickens when skim-milk and corn meal will do just as well?

You can find hardly a trace of cream in milk separated with an I. H. C. Cream Harvester, which separates to a ten-thousandth part. And that's not half of the story. Four or More Cows Make a Cream Harvester Pay. It will pay because it practically cuts in two the work of keeping cows. It does away with

washing numerous pans, crocks and strainers. You skim right at milking-time and have done with it all. You have only pure cream instead of a wagonload of whole milk to haul to the creamery. You have fresh, warm, sweet milk that has life in it for the calves. You can keep more cows and greatly increase your profits without any increase in labor. You are not keeping cows for the fun of it; but for the money you can make out of them. The I. H. C. way is the money-making, labor-saving way. There are two I. H. C. machinesthe Bluebell and the Dairymaid—each made in four sizes. Both are easy to turn and easy to clean.
