

Figure 8. The Wild AVIOPHOT RC20 Aerial Camera System with camera (left) and navigation sight (right). The camera mount has servo motors for remote-controlled levelling and orientation of the camera. The camera is equipped with automatic exposure meter control and forward motion compensation systems. There is a choice of super-wide, wide and normal angle lenses which are interchangeable in flight. With a plug-in interface, the RC-20 can be linked to and controlled by an air navigation system. The camera can record external real-time navigation data as well as the camera status data in the margin of every photographic exposure. (Courtesy of Wild Leitz Ltd.)
