

February 13th 1924.

Professor L. V. Herdt,
Department of Electrical Engineering,
Engineering Building,
McGill University.

Dear Prof. Herdt,

I enclose you herewith the following documents received from the Department of National Defence:-

- (1) Lecture Notes - Volumes 1,2,3, - Elementary Electricity & Magnetism, Line Instruments & Testing.
- (2) General Report on Wireless Telegraphy Communication - Canadian Corps.
- (3) Draft of Militia Order - Provisional Schools of Instruction - Radiotelegraphy.
- (4) Map of Radio Communication Scheme, Department of National Defence - up to Stations proposed for 1925. (This is for your information only and not for re-publication).

I will forward you later on a very important report on the Signal Communication in the Canadian Corps. I might remark that practically no copies of this report are left, and from the point of view of Army signallers, it is without doubt, one of the most valuable documents produced in the B.E.F.

Yours faithfully,

Wilfrid Bovey.
