PRINCE OF WALES VISITS HIS MINES IN THE DUCHY OF CORNWALL.

Previous issues of "Mine & Quarry" have described the great interest which Cornish mining men have taken during the past two years in the introduction of Sullivan diamond core-drills for prospecting in the mines of Cornwall. The accompanying photograph was taken on the occasion of a visit of the Prince of Wales, who is also the Duke of Cornwall and Devonshire, to the Kit Hill Mine in June, 1919. The "Western Morning News" of June 11th says, "Because of the enterprise of the Duchy management in installing up-to-date machinery, these mines are providing valuable quantities of tin and wolfram, the supplies of the latter having proved of great national service during the war. The Prince showed a decided aptitude for making the most of his time, and was shown, what is a novelty in Cornwall, the new Sullivan diamond-drill, which began its work of boring on May 28th. This drill bores out a core of rock about one inch in diameter, from which can be learnt the properties of the lode, the object of the drill being for prospecting. It has already bored about 120 feet, the average being about 12 feet per day (horizontal holes in single shifts) and its ultimate depth will be over 700 feet. The Prince spent some time watching the drill at work and displayed a very keen interest asking many questions relative to the working of the drill. Specimens of metal which had been extracted by the drill were also shown him."

The Prince in the photograph is shown close to the swivel-head, watching the machine work.

Mr. W. H. Seaman, Jr., has accepted a position with the Matachewan Gold Mines. His address is Elk Lake, Ont.
