

whole, however, prognosis, as regards life, is good, and unless the whole lining of the bladder has come away, control of the sphincter is regained sooner or later.

*Treatment.*—There is no special form of treatment for this condition, that indicated for ordinary cystitis being also indicated here, except that you should not wash out the bladder for several days after the passing of the membrane for fear of causing perforation or rupture of the viscus, and you must keep up the patient's strength with stimulants.
