

*Cardium pinnulatum*. Not infrequent at Summerside.

*Venus mercenaria*. In thirty barrels of oysters ordered from one firm at Summerside a single specimen occurred. In one barrel from another firm eight or nine were found. It evidently occurs in some parts to the exclusion of others. The type specimen seems to have tips of purple on the point (interior) in each shell. A pure white is found. Another has one valve colored and one white. Again it occurs with the purple color around the entire circumference.

*Tellina tenera*. This delicate and beautiful shell occurs at Summerside, but is so easily broken that only one whole specimen is reported.

*Petricola pholadiformis*. Rare at Summerside.

*Saxicava rugosa*. Occasionally, but very small at Cocagne.

*Pandora trilineata*. Not infrequent at Summerside.

*Cumingia tellinoides*. Occurs occasionally at Summerside, those found being mostly young forms.

*Corbula contracta*. Common at Cocagne.

*Macra lateralis*. Summerside (?)
