31	Wednesday,	3 in Perihelion.	6 38	4 50	11 44	☽	7 50

Stiff, hard, cloggy land should now be ploughed. Fall ploughing saves time in the spring, when the cattle are weak, and other work presses on the farmer. A light sandy soil, however, should not be disturbed by fall ploughing, but lie to settle and consolidate through the winter. Horses now require strengthening food, as a preventive of disease in winter, as well as support through the severe labor of the present month. Cattle and sheep, which are not forward enough for the butcher, should now be taken from grass and put to better food. Milch cows also require some assistance to their grass food, or their produce will fall off. Do not undertake to winter more stock than you have means of providing for. Carry out and spread compost, soot, ashes, &c. on such of your mowing grounds as stand in need of manure. Take up parsnips, carrots, potatoes and beets. Gather apples; handle with care; pack them in barrels, do not roll but lift the barrels. Transplant trees; make your selection from the best kinds, it is folly to purchase fruit-trees of doubtful quality. Swallows now depart to southern climes; the snipe arrives; the wild goose seeks dry land, and the wood-lark, sings a farewell to the sunshine of summer, and the falling leaves of autumn.

Saddle Galls.—
vinegar.
