at most by the promiscuous intermix ing of three or four established varie-

to decline to form separate classifica-tions for them at shows. Speaking of exhibiting brings us to another and most important question affecting buffs in particular—viz, as to the legality of color feeding. There can scarcely be a doubt in the mind of any true fancier that to dye feathers by feed-

ing with color is no more creditable than to apply the dye externally, nor is it easy to see what satisfaction a successful exhibitor who follows this prac-

tice can derive in wresting a prize from

his less fortunate but more honest rival, who scorns to convert what should be a buff bird into an orange one by artificia

responsible not only for many absurdi-ties, but by emphasizing with one hand some trivial detail in a breed, such as

lobe or comb, has with the other destroyed more serviceable qualities.

Minores fanciers, for instance, are surely discovering that the fashion of breeding chiefly for comb is not only depriving their favorites of their well

earned reputation for laying, but in making the breed more delicate. Again,

the followers of modern game are beginning to see many good qualities in the neglected old English breed which for

many years had escaped their notice, while we have yet to discover the table

bird to eclipse the game Dorking.

Let us not, therefore, give way to the

ence such sterling breeds as Hamburgs, Andalusians and Brahmas, not to men-

tion several others which in points of utility or fancy will give their patrons

as much if not more satisfaction than

sulting offspring be to possess and per-petuate all the good attributes of the

various progenitors.—H. B. Greene, M. D., in Poultry.

cracks and crevices are olosed up,

As cold weather comes on see that the

There was nothing for it but to dent of Girton, having had quite enough of learned society for the proposal. Alleyne took the sheets and began to run his eyes over them, indicating an error here and there. Suddenly at the bottom of a page he stopped short.

"That is a novel idea."

"Which? Where?"

"Here on page 01."

"Indicating the sheets and there and there are the stopped short.

houses mean a saving in feed and an increase in eggs.

But artificially heated houses lead to pampered stock, which will destroy, in a great degree, their natural hardiness and vigor. Every precaution should be taken to construct houses as warm as boards, paper, lath and plaster can make own points and color it behooves the them, also to locate them in a sheltered spot, where a bank of earth, hill or wburn locks.

"I didn't—feel confident," stamneered the professor.

"Was that why you wouldn't rise of ground which constitutes natural drainage is the best site. The front should face the south or southeast, thus to catch the warm sun in winter. Winof light, but not too large, are very im-

Good heavens! What was he about? This train of ideas was absolutely new. But for Miss Affleck's mauuscript it would never have risen in his mind. The professor was a man of honor. A cold sweat of dismay broke out upon his forehead as he realized the nature of the crime he had been near committing. He to pick a girl's brains! He shuddered at himself. He shuddered at himself. He shuddered. Yet he was sorely to the professor looked at her hard to look again at that the professor looked at her hard. The professor looked at her hard the professor looked at her hard. The professor looked at her hard the professor looked at her hard. The court is and not be consideration should be feed. As the Plymouth Rock is a heavy breed, somewhat slower in their movements than the sprightly Leghorns, for example, they can be very easily overfeed. To guard against this tendency they should be kept comparatively hungry, in order to induce them to scratch and hunt—in other words, to exercise. It pays best to give them this exercise outdoors at all seasons of the year, whether the weather is cold or warm. If snow is on the ground, it should be supported to look again at that The second consideration should be the outer air and not be centinually con-

tity of cold weather.

If the breeding stock is cared for thus "How beautiful!" Maud Affleck with a view of maintaining strong healthy, vigorous specimens, the eggs will be found to hatch well and the chicks will live when hatched and

"What is the meaning of these hieroglyphics?" she inquired. (The professor wrote an execrable hand.)
He explained, reddening slightly, they were "rules for tran-The young stock should have, how-ever, in either case, plenty of range to induce growth and development. The old stock do much better generally and produce more eggs if kept yarded the year round, but the youngsters should have perfect freedom until they reach maturity. As Plymouth Rock chicks are rather slow growers it is best to hatch them by the middle or last of March, and if hens are not broody then the machines should be called into use.
This early hatching will give us layers

> not been perfect.
>
> Early eggs in November command a high market price, and it will thus pay well to make your pullets producers at once. A free use of raw meat three times a week will be found a great help in inducing early maturity. This, however, must not be used until the stock is two-thirds grown and after the bugs, grasshoppers, etc., have become scarce.
>
> If green food is hard to find on the range, as it usually is in September, it should be supplied, as it is very neces-

sary, being the natural food of all pouldo. Still, the advice of a successful breeder is a great help to the beginner if he will follow it. The Plymouth

cumulate breeds cholera. A little attention to the whole flock will keep them in condition A little manure in the henhouse, add

ed to a little of the day before, induces lice. FACTS AND FASHIONS.

In these days of keen competition and ransient novelty, when the efforts of a large proportion, though fortunately not all, of the fancy seem for the time being to be concentrated either upon producing mongrel strains or attempting, if one might use the term, to buffoon each and every established variety which has the misfortune to some under their notice, it is a matter almost for serious apprehension that old and well tried favorites, which in the past have not been found wanting, are becoming temporarily scarcer, both in the exhibition pen and utility yard. I say temporarily, because it is my firm belief that the poultry world, after its attack of yellow fever has subsided, will again return to the knowledge that mongrelism does not necessarily mean utility, and that but little credit, if any, attaches to the process of color feeding.

Meanwhile it is a matter for congratulation that here and there throughout the country genuine fanciers are to be found, who glory in preserving purity of breed and can look back with pardonable pride on the many years of patient effort which have resulted in success, and that, too, without the aid of chemicals or dyes. To this quarter by and by we shall be constrained to look for salvation when the craze for buffor sa gratulation that here and there through-

This is the "egg type" that should be bred for in the Minorcas, which are undoubtedly among the best egg machines of the nineteenth century. This hen was pronounced by judges and breeders to be the best they ever saw, and Judge Zimmer, in his report, said she was the very best he ever judged. Poultry Points.

The best fowls for breeds are from Securing eggs in winter is largely the Everything in point of plumage and symmetry depends in the sire, If fowls are to be confined, they

My experience clearly proves that for strongly fertilized eggs whole grain is the best, and if fowls have free range corn is the best of the grains, care be ing taken, of course, not to feed too generously to make them overfat. I have noticed for a long time that hens fed almost exclusively on whole corn lay rich er eggs, with higher colored yolks, than those fed on a more nitrogenous ration for the purpose of getting the greatest number of eggs. This led me to think that corn and whole grain would give better eggs for hatching, and upon experimenting I found it true. - J. E. Stev
