Unthrifty Pigs.

I had a bunch of hogs last fall that did not seem to do well. They appeared to have a disease that affected their skin. They became scurfy and dry in the hair. The ration consisted of shorts, bran, mixed meal and a little ground flax, with water and milk. I sprayed the pens with a disinfectant and the pigs appeared better each time I did it. When the weather became cold I had to confine them to the pen, and I lost several of them. One veterinarian pronounced the diseases mange, and said it was not contagious; another one said it was a form of indigestion. I cleaned the pens thoroughly, and whitewashed them, adding a little carbolic acid to the wash, then I sprinkled dry lime on the floor. From that time on they began to improve and are now doing remarkably well. I am feeding the same grain ration with alfalfa added. My experience in feeding small pigs is that the feed should be mixed sloppy before feeding.

Note.—The thorough cleaning and whitewashing of the pens is a practice

HOLSTEIN HERD AVERAGES 18,812 LBS. MILK

A herd of 13 pure-bred Holsteins last year averaged 18,812 lbs. milk and 638.57 lbs. fat. Do you realize the money there is in such cows? It is estimated that the average annual yield of all cows in this country is under 4,000 lbs. These 13 cows produce as much milk as 62 cows of the 4,000-lb. class.

Why feed, milk and shelter any more cows than you need to produce the milk you require? If interested in HOLSTEIN CATTLE send for booklets—they contain much valuable information. **HOLSTEIN-FRIESIAN ASSOCIATION OF CANADA**

which should be followed in all piggeries. If it were more scrupulously done, the result in feeding winter pigs would possibly be more successful. A sort of mange or eczema frequently breaks out on unthrifty pigs, which may be the cause of unthriftiness and in many cases stunts them. The adding of alfalfa to the ration should also have something to do with the improvement in the pigs.—EDITOR.

Warts.

I have noticed several enquires for a recipe for removing warts on cattle. I have used the following, with success: One dram of arsenic and two drams of lard mixed. Heat the lard until thoroughly melted, put in the arsenic, and stir until the lard is cool. Put a little on the wart every three or four days and it will soon disappear. **E. E. H.**

Note.—We have had no experience with the above remedy, but pass it on for what it is worth. We do know that caustic, or butter of antimony, will remove a wart with one, or, at most, two applications. Warts with constricted necks may be cut off by a silk thread, and small warts have been removed by several applications of castor oil.—Ed.
