Weak Men! Try This

IT COSTS YOU NOTHING UNTIL CURED

Prof. O. S. Fowler, in his work on the treatment of nervous diseases, Prof. O. S. Fowler, in his work on the treatment of nervous cases, mays: "Sufferers little realize how far they are restorable, yet they seek relief in wrong directions, for medicines cannot cure this class of disease, but, on the contrary, they almost universally prove injurious. They are no more contrary, they almost universally prove injurious. on the contrary, they almost universally prove injurious. They are no more adapted to reach these cases than a dose of ipecac or jalap is to assuage a mother's grief for the loss of her darling babe, for the disease, being largely local, the restoratives must be applied directly to those prostrated parts; and, since electricity is undoubtedly the instrumentality of all life, it necessarily follows that this element constitutes Nature's own most potent remedy in these diseases when rightly applied."

The first impulse of a man who discovers that he is afflicted with a desentation of one of the important functions of the body is to plunge into a drug store and purchase a box of pills of a bottle of some patent medicine. Failing to get more than temporary relief from this, he next consults his doctor, who is probably of the old school, and sticks to the old methods. He writes a prescription, which more than likely calls for the same drugs contained in the patent medicine the patient has already taken. Next, the patient comes to the conclusion that this doctor didn't diagnose his case right, and he goes to another, with the same result, and so on until his stomach and nerves are wrecked. Nature gives us ejectricity with which to build up vitality. Electricity is the life of the nerves, and every organ depending upon them, and DR. Molaughlin's Electric BELT is the most scientific, up-to-date and economical way of applying it. and economical way of applying it.

Dear Sir,—Regarding permanency of results obtained through the use of your Belt, I must say that I am perfectly cured. I have before this informed you of my complete cure, and since then I have always attended to my every-day work without lesing one minute. All this I owe to your Belt, and you can now, and I will also, assure every one in need of treatment, that your Belt is the means of obtaining a sure and true cure.—Yours truly, Arthur Morency, Hallow

MY BELT can be used for hours at a time, thus allowing the weakened nerves to absorb the current. electric life and force into your body while you sleep, warming and vitalizing the nerves and blood, and invigorating every vital organ. It has attachments for both men and women, by means of which the current can be applied to any part of the body. IT CURES NERVOUSNESS, FAILING VITALITY, BACKACHE, LUMBAGO, RHEUMATISM, SCIATICA, INDIGESTION, CONSTIPATION, STOMACH, KIDNEY AND BOWEL TROUBLES, and, in fact, any and all of the many human ills which are now successfully treated with electricity by the most learned and scientific physicians in the world. cians in the world.

cians in the world.

"If you are sceptical, all I ask is reasonable security for the price of the Belt, and pay when you are cured.

FREE BOOK, If you cannot call, then fill out this coupon, mail it to me, and I will mail you free, sealed and in plain envelope, my Book, which contains many things you should know, besides describing and giving the price of the appliance, and numerous testimonials. Bred from imported and Canadian-bred sires and dams, and bred on prize winning lines. My brood both sexes. Some sows bred to imp. boars.

HENRY MASON, SCARBORO P. O.

OUESTIONS AND ANSWERS. Miscellaneous.

CHOLERA IN CHICKENS AND TURKEYS. The heads of my chickens and turkeys get a dark red; their eyes swell, and the body swells, and they have cholera. They stop feeding, and seem to be very thirsty. They live for eight or ten days thus, and grow so weak that they I have been feeding boiled wheat die. and shorts, and they can run all over W. J. the fields.

Ans.-We are inclined to think our inquirer has answered his own question correctly. The symptoms point to cholera. When this disease makes its appearance in a flock that has free range, it is almost impossible to control. Strangle and burn all diseased birds, and house the remainder in restricted quarters, removed, if possible, from the old Infection takes place usually range. through food or drink that has been fouled by discharges of diseased birds. The germs also gain entrance to the body by inhalation of dust in infected coops which have not been properly disinfected. Blood and flesh of diseased birds eaten by others will communicate Pigeons, sparrows and the disease. other birds may spread the contagion when the disease is present in a neighborhood. Avoid, if possible, all these dangers of infection. Disinfect runs and houses with a five-per-cent, sulphuric acid solution. Disinfect water for drinking and other purposes with a teaspoonful of napcreol in each two-gallon bucket-Give any birds showing a suspicious looseness of the bowels a three-drop dose of spirits of camphor made into a small pill with bread crumbs and a little sugar. Administer twice daily for three or four days. Prof. Elford reports good results at the Government poultry stations from the use (as a preventive) of a teaspoonful of sulphocarbolate of zinc to a gallon of drinking water, used for several days.

$\begin{array}{c} \textbf{LAYING} & \textbf{CEMENT} & \textbf{STABLE} & \textbf{FLOOR} & - & \textbf{PLAN} \\ & \textbf{OF} & \textbf{STANCHIONS}. \end{array}$

1. Would you, or some of your many readers, give, through the medium of vour very valuable paper, a good plan for laying cement floor in cow stable and putting in stanchions? What thickness should the floor be made? What kind of cement is best for that purpose, also price per barrel, best method of mixing, and how often, and what proportions? 2. Would also like some good plan for wooden stanchions, dimensions, etc.

SUBSCRIBER. Ans.-1. Cement stable floors should be about three inches thick. Having the ground levelled and firm, set up threeinch scantlings on each side of the strip of floor to be laid, being careful to have the upper edge of scantlings perfectly straight, and exactly where you want the surface of the floor to be. Mix thoroughly dry Portland cement and gravel in the proportion of 1 to 8; wet, and again mix; fill level with top of scantlings, and scrape smooth with the edge of a board resting on scantlings. After ramming firmly, the surface will be about half an inch lower than before. Next, mix, as before, cement and clean sand, one to three, fill up the half-inch space; again scrape level with the edge of a board, and smooth with a trowel. 2. We have seen very satisfactory wooden stanchions made of 2 x 4 Nor-

way pine scantling. This is quite strong enough for any animal. In the case we have in mind, both upper and lower frames for holding stanchions were also made of the same size of scantling. The rigid half of stanchion, four or five feet long, was fastened at both top and bottom by being bolted between two scantlings running horizontally on edge. The swinging half was made a little thinner at the ends so as to play easily in space between scantlings, and was fastened at the bottom by a single bolt, and at the top by a U-shaped loop of heavy wire. This wire was fastened on the upper side of top pair of scantlings by a couple of staples in such a way that the loop end rose and fell freely. The upper end of swinging stanchion was cut slanting so that when pushed into position it raised the wire, which then fell behind and held it.

Limitation in thought will certainly produce limitation in possession.
