#### A GREAT HARBOR

#### New York is the World's Greatest Seaport.

In the Gomanus section of Brooklyn N. Y., it is proposed to construct five municipal piers, two of which have already been completed, from 1,200 to 1,780 feet long and made almost entirely of reinforced concrete. Each pier is divided into five fire zones by four reinforced concrete fire walls extending from side to side of pier and from low water to the under side of the deck, thus act-ing as fire stops. Two lines of five man-holes are made in the deck, so that every part of the sub-structure is accessible for fire fighting. Besides this the piers will be equipped with automatic water sprinklers, which open in case of fire and drench with water the material

In Engineering News of March 7, Mr. Chas. W. Staniford, Chief Engineer of the Department of Docks and Ferries of New York City, describes these new harbor improvements, which have been made absolutely necessary in order to maintain New York's supremacy as a

The South Brooklyn shore possesses many desirable features of industrial and commercial development. The cost of the land is not prohibitive, as long as the shore of Manhattan, factory sites are therefore available adjacent to existing and proposed wharfage and ware-house facilities.

The harbor of New York is unques tionably one of the finest natural harbors of the continent, perhaps of the world. Till the beginning of the 19th century it was predicted that Boston or even Newport, would become the great port of North America. As late as 1812, Philadelphia was the superior of New York as a financial and commercial cen-ter. Contrary to all predictions, how-ever, New York has left all other cities far behind in its phenomenal growth.
To-day its commerce exceeds that of any
other port in the world, including its great rivals, London and Hamburg. Its population, according to the last census, is also increasing about 21/2 times as fast as that of London

The measure of the commerce of a ort is the total volume of tonnage of the vessels entering and clearing. total tonnage entering and clearing. The total tonnage entered and cleared at London during 1910 was in round numbers 20,230,000 tons; at Hamburg 22, 300,000 tons; at New York Sity, 25,600, 1910 tons. 000 tons. The corresponding figures for New York City for the year 1901 were approximately 16,300,000 tons. Thereere the average increase in tonnage during the past ten years was a million per

The value of imports through New York harbor during the year 1910 approximated \$936,000,000; exports, \$652, 000,000, a total of \$1,588,000,000, giving the Federal Government a revenue of approximately \$200,000,000.

# Shiloh's Cure STOPS COUGHS PRICE, 25 CENTS

#### HAD THEM SPOTTED.

Two small boys had strayed into the minmmy-room of a museum. Grouped round them were the weir forms in varount them were the weir forms in various states of repair or otherwise. "Wot's these?" asked one wee youth, cagerly. His companion had a reply at hand. "Blokes wot's bin dead a long ime," he answered ungrammatically. But the seeker after information was not satisfied.

"And wot's them letters over the bloke in the corner? Look, B. C., 287?"
"That" came the reply. "Why that's the number of the motor car that ran ever him!"

#### PHILOSOPHIC.

An American who spends much of his me in London tells of a philosophic financier in the British capital who, af-ter being at the "top of the heap," saw his wealth swept away. His friends came to condole with him. They found him cheerful.

I am living alone," explained the philosopher, "and disturbing just as few of my habits as possible. I get up at nine o'clock just as I always used to and ring the bell for my valet" exclaimed the friends. "are

you still able to keep a valet?"
"No," sighed the philosopher, "but I keep the bell!"—New York Herald.

#### Minard's Liniment Cures Burns, Etc. NO TIME FOR VANITY.

Mrt. Phelps Stokes, well known for or quiet, unostentations, philanthropic ark in the tenement districts, has one jet aversion, and that it anything approaching snobbishness. Not long ago in a speech she said: "I hate the snob in a speech sic said: "I mate the such so biliterly that I almost sympathize with the thief in the tumbril. It was during the brench revolution. A margues and a thief condemned to death rods side by side in a tumbril to the guilleting. With them rode a congrable state of the product of the pulleting. guilleting. With them rode a cenerable price; Effering them consolation.
"As the numbril made its way through the crowdel streets, the mobilising surgest about it. 'A bas la noblesse! Down

A bas la moblesse! De the the cursed aristocrais!' yelled the

The thief rose in the eart. My Thaty sportly the aged priest plucked film by the coat. prise: down, my friend, sail the prise: the is no time for vanity.

#### TIMING HIM.

"I have learned," said the private de-te the "where your son went after tak-ing the contents of your money drawer," "Plat is immotian," said the father, "The took a thousand, and he's sure to return after he squanders it," "He took the train for New York," said the detective. back inside of a week."

THE POLICE OF PARIS.

(New York Sun)
Staistics which supply an admirable opportunity to compare the police force of Paris with that of this city both as to

opertunity to compare the police force of Paris with that of this city both as to numbers, organization and pay are furnished by an official report which has just been published in the French capita. Needless to say, the local policeman will find nothing unfavorable in the comparison of his lot with that of his Parisian brother in clubs.

Rank and file included the Paris police force counts 8,000 men for a city of sikhtly less than 3,000,000. New York, with just under 5,000,000 people, has 10,138. Of the French force 7,000 are of the rank corresponding to New York patrolimen and 880 of the next rank, which corresponds to sergeant here. Of the balance sixty are brigadlers, comparable with lleutenants, twenty-eight inspectors and twenty-five officers. Thus there are 123 officers above a sergeant in the French force. The number in this city is 724, or or a little eles than snix times as large. The pay of the French patroliman (gardien de la paix) ranges from \$400 to \$520 with an additional clothing allowance of \$38.75 annually, against 800 to \$1,400 to \$620 against \$2,750 for New York captains.

In Paris as in New York the policeman can exite with a fire feature of the fire number of the fire contents and the fire sume feature of the policeman can exite with a fire feature of the policeman can exite when held near the fire contents and the fire

In Paris as in New York the policeman can retire upon half pay after twenty-five years of service, and the Frenchman can count his time in the army. Retirement for physical disability on a proportionately smaller pension is possible after ten years of service, and on application, after fifteen years. After twenty years of service the last five without punit ment, it e Parisian policeman gets a medal which brings \$10 a year extra pay.

punit'ment, the Parisian policeman gets a medal which brings \$10 a year extra pay.

As in New York, all grades and ranks are onen to the Paris policeman, but in the French capital the competition is much more severe and the posts far less numerous in preportion to the size of the Gepartment. Having passed all tests the Paris sergeant must undergo a further trial of from one to two years before he is finally commissioned.

The organization of the Paris department corresponds roughly to that here. The force is divided into twenty-five companies, twenty of which are distributed among the civil divisions of the own five are held in reserve at the Prefecture. The reserves are used in any emergency any public gathering or celebration and to reenforce any company has dangerous district in a case of riot. They also furnish details for balls, concerts, and races, and one company has charge of the carriage traffic of the city.

Thus the conditions of service of the French policemen are far more severe than those of the New York bluecout the may but a third or a half, and the openings for advance immeasurably smailer. Yet the ranks are always full and the applications indicate the attraction the service has for Prenchmen.

#### Minard's Liniment Co., Limitel.

Gentlemen,-My daughter, 13 years old, was thrown from a sleigh and in-jured her elbow so badly it remained stiff and very painful for three years. Four bottles of MINARD'S LINIMENT completely cured her and she has not been troubled for two years.

Yours truly, J. B. LIVESQUE. St. Joseph, P. O., 18th August, 1900.

### DO YOU DO THIS?

Add a pinch of salt and a tiny lump of lard to starch when boiling to prevent the iron sticking to the cloth.

If the morning egg spoons are rubbed with table salt after they are rinsed in warm water all discoloration will be removed without having to use silver polish.

Lemons, hardened from long standing, may be made usable by covering for a few moments with boiling water. Pans greased with butter will make

he bottom crust of pies soft and flaky and prevent them from being soggy.

In refinishing furniture it is some imes necessary that the old varnish be removed, which in most cases is very difficult. Three tablespoonfuls of cook-

sing soda to a quart of water applied with a rough piece of cloth will remove the old varnish very easily.

Never darn knitted underwear with wool. It will shrink and leave a larger hole. Instead use loosely twisted knitting silk. Darn the garment loosely and ting silk. Darn the garment loosely, and en washed the silk same thickness as the knitted goods.

#### RULE FOR CHESS PLAYERS.

A proposed rule in the chess match be tween Messrs. Lasker and Capablanca provides that illness shall not interfere with the playing of any game on the ground that "it is the business of the players to so train themselves that their bodies shall be in perfect condi-tion, and it is their duty, which by this rule is enforced, to study their health and live according."—From the New Orleans States.

Seven Days' Use of Catarrhozon Performed Regular Miracle.

Miss Counter's Cas- Proves the Won 'derful Efficacy of Catarrhozone in All Throat and Nose Diseases.

Windsor, Ont., March 18 .- Miss Coun-

Windsor, Ont., March 18.—Miss Counter's case will prove of great interest to everyone troubled with sore throat, bronchitis or weak lungs.

When asked for a statement, Miss Counter said: "About seven years ago I contracted a heavy cold that settled on my lungs and resisted all treatment. After I had tried several doctors here and specialists in Detrait ment. After I had tried several doctors here and specialists in Detrait without benefit, I went to my druggist and asked him for the best remedy he had for cold on the lungs. He recommended Catarrhozone, which cured my cold in one week. It brought ed my cold in one week. It brought back my voice, and I have been ever since free from my old trouble. For coughs, colds and lung trouble I am sure that Catarrhozore is the best remedy. It goes right to the sore spot, gives quick relief, and makes a lasting cure."

Catarrhozone cures because its healing vancy is inhaled to the year please.

ing vapor is inhaled to the very places that are sore and inflamed.

To permanently cure your winter ills, To permanently cure your winter ills, your coughs, sneezing and Catarrh, by all means use a tried and proven remedy like Catarrhozone. But beware of the substitutor and imitator. Look for Catarrhozone only, 50c and \$1.00, at all dealers, or by mail from the Catarrhozone Company, Buffalo, N. Y., and Kingston, Canada.

#### WHY MILK TURNS SOUR.

Perhaps you have often wondered why t is that if you let milk stand for a short time, especially in warm weather, it will turn sour and become unfit to use in your tea or coffee, but if it is boiled

and then scaled up in some sort of airtight can or jar it will keep for any length of time, in any weather.

Many persons believe that a thunderstorm will turn milk sour, and if you ask them what the thunder, which is nothing but noise, can do to the milk you will find they have no idea but

you will find they have no idea, but they just know it is so. So there! The reason that milk turns sour is that it contains a small microbe that makes an acid from sugar in the milk. When the milk is boiled these microbe are killed and the acid is never devel oped. Warm air, and even electricity in the air, is very favorable to the rapid growth of these microbes, which are really a sort of plant, and all plants flourish in warmth.

The acid which is made by these microbes in the milk is called lactic acid, and if the milk is good and clean it is none the worse for turning sour, al-though it is not just the thing to put in tea. For some persons sour milk is much more wholesome drink than sweet milk and is recommended by some doctors for the cure of certain diseases. There is famous Chinese statesman who be ieves he will live to be 150 because he drinks so much sour milk every day.

#### EXPLORERS OF A CONTINENT.

Explorers of a continent.

(Buffalo Express.)

Englishmen should not feel chagrined because the Norwoglan, Amundsen, rather than Captain Scott, was first to reach the South Pole. The first place in Antarctic discovery already had been won by an Englishman, and the highest honor in that field must always be awarded to Sir Ernest Shackleton. It was Shackleton who first penetrated the interior of the Antretic continent, proved the correct method of travel, mapped out the disclosed the nature of the country, and furrished all the information necessary for those who should follow him. The only reason why Shackleton did not reach the pole itself was that his supplies were insufficient. Starting out to penetrate an unknown region, with no knowledge of the dificulties he must encounter, it was impossible for him to calculate exactly the amount of supplies which he would need in order to reach the pole and ensure a safe return. But the results of his experience showed with sufficient exactness the quantity which he would have needed. It was only necesary for the mext traveller to increase the amount of his supplies by a few hundred pounds beyond what Shackleton had and he could feel reasonably certain that they would carry him to the pole and back. It was a practical certainty that the next energetic man who followed Shackleton would reach the pole. Amundsen proved to be that man.

#### THE AIR MILE.

The "air mile" is a unit of measure ment that has come into use with the advancement of aviation. We had the land mile and the sea mile, which is approximately one seventh longer than the land mile of America. The nantical mile is often incorrectly called a knot, but a knot is a measure of both distance and time. It is correct to say that a vessel makes ten knots, but to say that she makes ten knots an hour is tautology.

The air mile is measured different'y from the land mile and the sea mile. It is a land mile minus the retardation of an adverse wind or plus the acceleration of a favoring wind. Thus an aviator could cover many air miles while hovering ver a given point on the earth's surfac -Browning's Magazine.

As a safe-guard buy nothing in the baking powder line unless all the ingre dients are printed on the label. The manufacturers of the brands of baking powder in which large quantities of alum are used, are afraid to print the ingredients on the label, as no person would buy it at any price. Magic Baking Powder is pure and guaranteed not to contain alum.

NEVER THOUGHT OF THAT. Ollie James, the Kentucky represen tative who has just been elected United States senator, tells of the time when e was driving through a hilly section of his native State, partly for pleasure and partly on business connected with his political hopes. He came to a farmhouse where there was a nice-looking well and windmill, and he pulled in and asked the farmer if he might have a

drink.

"Ah'm sorry, sah," said the farmer.

"Ah'd suttenly like to commodate you, but I cyant. Ef you all 'll jest drap into Jones' place, 'bout a mile further on, maybe you (an git somethin."

"But I thought I noticed a fine well here on your place," said the senator from Kentucky.

from Kentucky. that's water! I didn't know you wanted water; I thought you asked no for a drink. You sure can have all the water you want."

### SPENDTHRIFT.

(Puck.)

Uncle Ezra-Do you think the money young Eph Hoskins made down in New York will last him hons?

Uncle Eben-You bet it won't! He's going at an awful pace. I was down in the general store last night, and young Eph was writing hundred dollar cheques and lighting his cigars with them.

NOTHING WRONG THERE.

(Montreal Herald.)
He was a newspaper publisher, and lay HI.

The doctor came, put his ear to his breast, and said: "All that troubles you my dear sir, is that your circulation is bad."

"Circulation bad, doctor," sirrleked the man, as he shot upright in his bed, "Way, man, we have the largest circulation in the country."

It is easier to make excuses than

Electric Control of Tornedoes.

A German inventor recently gave a of the effectiveness of an electric sys-tem for the control of torpedoes and boats from a distant point. the craft seemed to be under the ab-solute control of the operator, it was also shown that it was proof against interference from electric waves generated elsewhere within its sphere of influence. The boat moved forward and back, turned right and left, described figures, was guided to definite points, rang bells, exhibited flags and light, fired guns, etc., giving proof of effective control. The mechanism is, however, far from perfect; the speed is not great, the responses to the operator's will are hesitating and inexact and the range is limited to a few score yards. The exhibition, in fact, was notable only as the beginning of the development of a mechanism of possible great importance.

### A CASE OF WAITING.

Jones made an engagement with a lady to take her for a drive, says the Boston Record. The appointed day came, but at the livery stable all the horses were out except one old shaky, exceedingly gaunt beast. Mr. Jones hired it, and drove to his friend's residence. The and drove to his irrend's residence. The lady kept him waiting nearly an hour, and then, on reviewing the shabby outfit, flatly refused to accompany him.

"Why," she exclaimed, "that horse way and the state of the

NA-DRU-CO

are new and entirely different from ordinary preparations. They accomplish their purpose without disturbing the rest of the system, and are therefore the ideal laxative for the nursing mother, as they do not affect the child.

Compounded, like all NA-DRU-CO preparations, by expert chemists. If unsatisfactory we'll gladly return your money.

"Madame," Jones replied, "when I arrived that horse was a prancing young

Minard's Liniment Relieves Neuralgia

### Use of Aeroplanes in Warfare.

Use of Aeroplanes in Warfare.
Lieutenant Rossi has just returned to
Italy from Tripoll, where he made about
sixty aeroplane flights during a period of
three months. He said that his experience
had convinced him of the utility of the
aeroplane in warfare.
He considered it of little value, however, for the purpose of throwing bombs.
To avoid being hit by the enemy's rifle
fire the machine must fly at a height of
at least 1,000 metres, and then it becomes
almost impossible to make sure of droppling explosives on a target below. But
for reconnoitering purposes the aeroplane for reconnoitering purposes the aeroplane was very serviceable.—From la Nazione.

Minard's Liniment Cures Dandruff.

PERFUME FROM KEROSENE. After knowing how many scores of dyes, flavors, etc., can be produced from common coal tar it is not sur-prising to learn that P. M. Short, an English chemist, has lately succeeded in extracting attar of roses, oil of violets and other delightful per-fumes from kerosene oil. He hit on his discovery by accident, while ex-perimenting with liquid air. Kero-sene oil remains liquid at all natural temperatures, but it is easily frozen by the aid of liquid air and can be made into candles. In this process Mr. Short noticed that after freezing the oil a slight residue was left which had an odor exactly like that of attar of roses, which is worth about five cents a drop wholesale. It has taken him four years to perfect the process. He also produces a violet perfume, but this is not a commercial success yet because it has a pink color and of course the ladies will not have a perfume which dyes their handkerchiefs.

#### HIS PREFERENCE.

(Harper's Weekly.)
Winkleby gazed at the new triplets with fatherly pride, but not a little appretension in his eye, nevetheless.
"What are you thinking, dear?" asked Mrs. Winkleby, softly.
"Nothin, dear, nothing," he said, falteringly, "only don't you think that it would be wiser for us hereafter to build up our little family on the installment plan?"
