Finds Moon Is Not A Dead World

Astronomers cling to the old idea that the moon is a dead world, des titute al.ke of air and water but recent observations of W.H. Pickering, made at Mandeville, Jama.ca go to show that many changes occur with the alteration of lunar day and night. Great snow Seads form in the mountain valleys and they then melt away; fog banks are seen and very rarely, drifting clouds. The loftiest peaks are snowcapped . The moon's surface in pitted with volcanic craters some of these measure 100 miles across. Each crater is surrounded by a mountain ring 1,000 to 20,000 fet in height

according to Pickering, are few, if any, such large and continuously active volcanic gions upon the surface of earth. But the activity the lunar velcanoes is now confined to the quiet emission of steam jets l'ke those found in Yellowstone National Park. Certain variable dark areas on the moon may be due to vegetation

BABY'S COLDS

Children's delicate digestions are easily disturbed by too much "dosing." Still, the little ones' cold troubles cannot be reglected.

At the very first sign of croup, sore throat, or any other coid trouble, apply Vicks VapoRub over the throat and chest. There is nothing to swallow—you just rub it on. Colds go over night, croup is usually relieved in 15 minutes.
