THE DANGERS OF COW'S MILE

The whole country is awakened to the grave danger lurking in the Milk Supply of our large citles. Wherever milk is used that has not been properly safeguarded from cow to the consumer, the infant mortality will always be high. After five years' investigation, the British Royal Commission on Tuberculosis confirms the theory of von Behring, that the tuberculosis of cows is a constant menace to the human race, and that consumption developed in later life has often been contracted in infancy, from tuberculous milk.

does not require the addition of milk in preparing it for use, as it is a complete diet in itself. The basis of Nestle's Food is cow's milk, so treated and modified that it will be easily digested, and will resemble mother's milk in its composition. as closely as possible. The milk supplied to the Nestle's Factories is collected under the most rigid precautions, from cows that are under the constant supervision of the Company's Veterinarians. Furthermore, the process of manufacture completely sterilizes the milk. This is fully set forth In our pamphlet, "Recent Work in Infant Feeding."
