**MARCH.**—The attention of Canadian farmers has been called to the cultivation of the vetch or tares. This leguminous forage-plant is reckoned very valuable, and is therefore extensively cultivated in several European countries. There are several varieties, all of which possess properties adapted more or less to the wants of the farmer. Many entertain doubts about the profitable introduction and cultivation of this plant in our climate, but considering the value of the vetch as an article of food for all the animals of the farm, all of whom are very fond of it; it might not be amiss to give the plant a fair trial in this country, before deciding that we cannot profitably raise it.
