Says Banker Vanderlip in Summing Up World's Commercial and industrial future.

Washington, Oct. 11.-Frank A. Vanderlip, vice-president of the National City Bank of New York, delivered an address before the bankers' convention today, in which he said he be-lieved the ease with which the financial world withstood the strain of war which cost the combatant nations two billions of dollars, was due to the greatly increased production of gold in recent years. To this increased production he also gave the credit for the recovery from industrial depression during the past three years.

At the same time he expressed the

belief that in this very increase there was a possible future disturbance of values. Should the present rate of production continue, he believed olume of money in the world would be doubled in twenty years, with the result that prices of many commodities would be greatly increased - possibly doubled.

While the increase in the supply of money would tend to advance price of real property, however, the price of an obligation repayable in money would not advance. Thus all persons having a fixed income, persons receiving a fixed salary and wage-earners generally would be at a disadvantage, for their income would not tend to increase as rapidly as the purchasing power of their incomes dereased

He believed, however, that the theory of the classified economists, that with the doubling of the gold stock would come a doubling of prices, would by the exploitation of virgin discovery of great quantities of gold tralia, and that the next few years me-nots. shoulder that ended my fighting in the time to be very bright, but gave warning that almost assuredly there were dangers lurking in the situation
