Oil is Power

THAT little film of oil between your pistons and the cylinder walls gives you maximum compression. When the oil grows thin and wears out you lose power. Good oil will last longer than the "gimme-a-quart" kind.

Havoline oil is the lasting kind.

This test chart, made on the Wasson Motor Check, shows the difference in the test made on a year-old six-cylinder engine with a rating of 23.5 horse-power.

Havoline Oil showed an increase of 5.8 horse-power over the ordinary oil, or a gain of 25 per cent.

Good oil certainly means more power. An easy way to prove that good

oil is power is to drain your crank

case and fill it with Havoline. LUMSDEN OIL CO., London, Ontario.
