ime in public life were Sir John Schultz. formerly Lt.-Governor of Manitoba, who died on April 13. He was also prominently connected with the public affairs of that province, prior to its admission stormy days antecedent and immediately subsequent thereto. In June two former lieut.-Governors of Ontario were added o the majority. Hon. D. A. Macdonald June 10) represented Glengary for a number of years, and was a member he Mackenzie administration, which he eft to occupy the more elevated position t Toronto. Hon. John Beverly Robinson (June 20) also represented Toronto the Commons and acceptably disharged the duties of the gubernatorial position in the province of which it is he capital. Hon. Mr. Balfour, who ad made his mark as Speaker of the Intario Legislature, died on August 19, hortly after he had been appointed to

he Provincial Secretaryship. All that remains for us is now to wish our readers, one and all, A Happy and rosperous New Year.

Statistical Supplement.

VICTORIA. BRITISH COLUMBIA, MONDAY, JANUARY 4, 1897

Pages 9 to 12.

British Columbia's Production of Treasure in 1896 the Greatest on Record.

The Entire Province Highly Mineralized and a Tempting Field for Investment.

the world over for her marvellous mining development which, as Hon, Mr. Davies, minister of marine and fisheries, sults. Mr. Carlyle, during the short time he has been in his present position, has been at great pains to examine as many of the mining districts as possible, to collect data for reliable statisics, and by means of bulletins to make public, at as early a date as possible, correct information. His valuable and timely report on the Trail Creek counry last summer was received approv-

as been paid to the Coast in 1896 than ever before, and as the prospector wan-ders further afield the mineral regions

It is satisfactory to know that Cariboo during the year just ended has, in placer gold, yielded \$110,000 m excess of 1895. The Slocan country output will show an enormous increase over the preceding well as it does at present, with no fewer than 35 shipping mines. The mining area in that part of Kootenay has greatly increased, especially up Springer and Lemon creeks and at the head of Koka-Slocan. Then to the east of Kootenay

district, bids fair to rival it in a few years, and it may be mentioned that the North Star, one of the larger silver lead mines, has shipped 3,000 tons of ore this

Assault, 48; aggravated assault, 15; aron, 2; and Animals Act [infraction of] one.

Burglary, 2; breaking jail, one. of ore in sight. On Perry creek, in East Kootenay, four quartz veins, three of large size, have been located, and show good gold values. The northern part of East and West Kootenay has hardly yet

there in the coming year.

Lillooet has held its own, and through
Yale, the Okanagan and Fairview and other parts of the lower districts, many properties have been staked and bonded to outsiders, while the Boundary Creek indication of progress throughout is a

drawback in Cariboo during the past year, it having been a very dry season for hydraulicing. However, for all that, more satisfactory returns than the veat

rected to her quartz mines. What is one of the surest indications of the high opinion held of British Columbia mines is the presence in the in-terior districts of representatives of the strongest capitalists of Europe, the Uni-ted States and Canada. Next spring will see progress far greater than during petition for good mining properties in Kootensy that whereas in former win-ters there was an exoduc from the dis-tricts for the winter, this year the hotels in Rossland, Nelson and other towns are crowded, and will be all winter. On the Coast, Texada Island, Alberni, Sarita, Barclay Sound and other parts have

come to the front, and another year will see some big outputs from these places to keep the mainland interior company. Some very large sales have been made during 1896, among which as instances may be mentioned the sale of a two-thirds interest in the Ruth mine at Sandon for \$666,000 to Mr. H. N. Foster, an Exalish capitalist, the sale of the enter-

English capitalist; the sale of the enter-prise group in West Kootenay, east of Slocan lake in the granite area, for \$300,-000; and Mr. S. S. Bailey's sale of the Payne group for \$80,500. A part of the coast that has in the last few months made wonderful progress is Shoal bay, Thurlow island, 220 miles north of Victoria between Vancouver island and the Mainland, and Phillip's

The wonderful discoveries on Texada happily put it the other day, "is like a chapter out of the Arabian Nights."

From the early "eighties" the provincial output of gold and silver gradually sank from a million dollars a year to about half that amount, until in 1895 it suddenly sprang up to \$2,500,000 and now for 1896 it is safe to say the output will reach \$5,000,000, the largest ever attained in the history of the province. The establishment of a bureau of mines by the local government, with Mr. W. A. Carlyle as provincial mineralogist. the local government, with Mr. W. Carlyle as provincial mineralogist, been eminerally satisfactory in refeet long, and another of 100 feet is being sunk, with crosscuts at each 50 feet to open up the vein well for working. There is a large amount of ore on the dump, and a 20-ton water-jacket smelter is to be erected for matting purposes. The Victoria claim, owned by Victoria

people, is another marvellously rich property that is being opened on Texada Island. Specimens literally spotted all over with small chunks of gold were ex-

over with small chunks of gold were exhibited a short time ago, and though, of a report on the Slocan, Ainsworth and Nelson districts which, with reliable statistics of the whole output of the precious metals for the province for 1896, will, it is expected, be before the public by January 10.

Mining progress has not been confined to any one or two districts of the province—it has been general. It is particularly gratifying too to see that more attention has been paid to the Coast in 1896 than year is an era of development that will make Kootenay look to its laurels in the output of the precious metals before

No Other Section of the World So Rich in Proven Properties.

British Columbians a few years ago looked back with regret to the days when "Golden Cariboo" was pouring its ore into the treasuries of the world, two or three millions a year of precious metal; and wondered if the good old times would ever return and this province regain her place among the great mining countries of the world.

The MINES OF TEXADA.

British Columbia is attracting to Victoria and the Mainland, and Phillip's Arm, the Alexander claim has been a verification of the numerous joint stock companies to the district. On Phillip's Arm, the Alexander claim has been sold for \$120,000 and already has shipped several mining countries of the world.

Slocan. Then to the east of Kootenay lake, on Crawford and Hooker creeks, the mining area is widening and much prospecting has been done south of Nelson on Hall and Whitewater creeks and the north falls of the Salmon.

The Rossland and Trail countries have attracted a very large share of the attention of mining men, the phenomenal growth of Rossland showing how people are flocking to the mining regions.

East Kootenay, though not yet drawing so much attention as its companion district, bids fair to rival it in a few moith:

600,000

Richness of the Alberni District Now Past the Point of Conjecture.

Vast Mineralized Area Which Promises Heavy Returns to

The Sonthwesterly Districts of Vancouver Island in Line as Gold Producers.

Kootenay mining district monopolized the attention of outside capitalists, it has gradually become better known that here on Vancouver Island there is mineral wealth that with the same amount of development will before long cause an inrush of investors. It was uphill work for several years for Kootenay to gain its 1.000,000 just recognition, and it was not so long ago that the statement that Kootenay's output would reach five or ten millions 500,000 a year, was actually laughed at. Now 650,000 people no longer sneer, for the millions are mounting up by leaps and bounds 1,000,000 with the impetus of judiciously invested capital. Just so will it be with Alberni. Prospects and mines have been opened 750,000 out, development has resulted from the constant influx of prospectors, new mineral areas are being discovered, and Alberni is to-day just in the position Alberni is to-day just in the position that Kootenay was when it forced the attention of the world towards it. Take for example the Alberni Consolidated mine, on Mineral Hill. Money now has been spent in opening it up properly, with the result that the vein has been proved to be a large and a rich one, a three-stamp mill has been erected on Mineral creek, and a road two miles long has been built connecting the mine with the mill. A trial test of 400 pounds with the mill. A trial test of 400 pounds of the Consolidated ore put through a week ago gave \$18 m free gold, besides the sulphurets, which bring the value of the ore up to \$100 a ton. Mineral-

Alberni on sea water by a nine wagon road, so that communication for shipping is excellent. A couple of new hotels have been erected as Mineral Creek to accommodate the constantly increasing demand for when there were only a few scattered projectors a year ago there are no week two hundred men working on Mineral China and Granite creeks and in the vicinity. At Alberni the little town has made a sudden start, for twenty-five new buildings were erected there during the year, and what is known as the "New Townsite" has been made a customa port of entry. The development of the quartz mines on Mineral Hill has been very marked, and a large number of claims have obtained crown grants in the year just closed. The Quadra group on Mineral Hill has considerable development work going on. The Missing Link and Champion have the same rich opment work going on. The Missin wider on the surface. The Mountain 1,000,000
1,500,000
Rose belonging to Vancouver people is
Eaving a hundred foot tunnel driven, and
the Mineral Hill Co., whose property
lies north of the Missing Link and Champion will be shipping in the spring. The Adelaide and Jack Taylor, belonging to 250,000 George Brown of Alberni, are showing up well as work opens up the vein and 500,000 the Minerva Casad and Happy Day be-500,000 longing to the Pacific Mining Co., are 500,000 among some of the notable properties 1,000,000 that are being worked on Mineral Hill. 25,000
The Ace of Spades and Last Ipollar belonging to E. J. Saunders and associates have obtained crown grants and the Minnesota group is having work done.

All these and many more claims on Mineral Hill might be mentioned as 500,000 are really having work done upon them.

Just across Mineral Hill to the south
of Mineral creek is Douglas mountain, 600,000 where not many months ago the Regins group was staked out, that have proved with work to be extremely rich with a huge body of ore running in copper, silver, 500,000 gold and lead; and there are other claims

1.000,000 works are in inil operation, and though 1,000,000 the company had many drawbacks, owing to forest fires in the summer, everything is now in good shape again and when the spring clean-up is made the returns will show that the enterprising men who put their money into the venture ware wise in their generation 10,000,000 ture were wise in their generation.
The Cataract claim is also on China 500,000 creek, and forest fires put its proprietors back far worse than the owners of the Duke of York, but it is expected oper-,000,000 ations will be resumed in the spring.
On Granite creek, a few miles further
25,000 down the Alberni canal, are a number of 1,000,000 25,000 down the Aform canal, are a number of splendid properties, including the Em1,000,000 ma, Hanna and Starlight claims, the
150,000 listander and others, while some thirty miles or so below Alberni, a short distance from the mouth of the Sarita

river, are the Sarita mines. Here there is an immense copper and iron deposit running in gold. Extensive development operations are in progress, and so highly satisfactory have they turned out that there is a very strong probability of a syndicate of capitalists erecting a smelter on the spot to treat the ore. Negoti-
