

## HOMŒOPATHY IN BAVARIA.

At a recent meeting of the Financial Committee of the Bavarian Parliament Herr Lundman proposed that a University Chair of Homœopathy should be established in the University of Munich. The Minister replied that the University, to which the question has been referred, had replied that the need of such a chair was not felt, inasmuch as homœopathy was not a science. A similar incident, which ended in like manner, occurred not long ago in the Wirtemberg Landtag.—*Brit. Med. Jour.*

## THE CARE OF CHILDREN'S TEETH.

The care of the teeth cannot be begun too early. If a child loses those of the first set prematurely the jaw contracts, there being nothing to prevent it from so doing; the second teeth have not space to stand properly and are crowded. Particles of food lodging between the teeth cause them to decay early. It is a wise precaution to teach a child to pass a thread of silk or dental floss between the teeth after eating, as well as to brush them regularly. Salt and water is a good antiseptic, and answers for a dentifrice as well as many more elaborate and more expensive preparations.
