Graduate students in the program master a core curriculum, take advanced courses in specialized areas, participate in seminars, and conduct research in areas of faculty expertise. M.E. candidates must (a) complete at least 45 graduate level credit hours, of which 40 hours must be course work, (b) complete and write a report on a research project while registered for at least 5 research credit hours, and (c) give a public oral... M.S. candidates must (a) complete at least 45 graduate level credit hours, of which at least 32 hours must be course work, (b) complete a master's thesis while registered for at least 10 credit hours of thesis research, and (c) give a public defense...

Artificial insemination Better characterize the milk-producing potential of dairy heifers Produce many calves from one embryo cloning Increase milk production Produce vaccines to protect animals against disease, including swine pseudorabies Produce... News coverage of the movement to legalize yellow margarine emphasizes that the issue was impact on the health of the dairy industry not of consumers. Instead of increasing production, research is now expected to increase sustainable profitability as part of rural economic development, which may favor large or well-managed farms at the expense of small farms.

Requirements for the composition of such a committee are given in Section IV of Guidelines for Research Involving Recombinant DNA Molecules (49 FR 46266 or latest revision),6 which also discusses the roles and responsibilities of principal... A roster of the members of the Institutional Biosafety Committee must be submitted to the Office of Recombinant DNA Activities (see address below). The committee is required to review each proposed nonexempt project for recombinant DNA experiments and certify that it has found the procedures, project, personnel, and facilities adequate and in compliance with NIH Guidelines.

Recombinant Antigens in Clinical Diagnosis Images: 1 Links: 0

(Lycos: recombinant) No rating

Recombinant DNA technology offers a method to produce highly specific antigens for use in immunoassays, including enzyme-linked immunosorbent assay (ELISA). This is an example of how recombinant antigens are an important advance in the development of
