Bridgetown, July 15, 1887, Dennison's Hall, 2 p. m.

Owing to the fact that this was the first really fine day for some time, most of our Annapolis friends were too busily engaged securing their hay to attend this meeting, consequently an adjournment was voted till 7 p. m.

A party consisting of President Hart, Prof. Saunders, Mr. Percy Saunders, Prof. H. W. and Mrs. Smith, R. W. Starr, A. McN. Patterson, T. H. Parker, A. B. Parker, and several other prominent members of the Association, embraced the opportunity to visit some of the principal orchards in the vicinity of Bridgetown. One tree in Vice-President Millar's orchard was found to cover a circumference of nearly 200 feet, and from which 20 bbls. of Nonpariels have at different seasons been taken. The party returned to Bridgetown much pleased with their drive and the appearance of the country generally in this locality.

## EVENING SESSION.

PRESIDENT HART, upon taking the Chair, addressed the meeting briefly. Referring to the report of one of the London apple men that our crop of apples would be large this summer, thought observation did not warrant this assertion. He considered the Nonpariel crop far below the average. Strawberries had been a smaller crop than usual.

The Secretary read minutes of the Spring Meeting, held at Berwick, which were adopted.

Attention was called to the proposed meeting of the American Pomological Society to be held in Boston in September.

R. W. STARR.—It is very desirable that this Association should be represented at that meeting.

PRESIDENT HART said it was his intention, if possible, to attend.

It was moved, seconded, and passed unanimously, that the Executive have power to issue credentials to any member in good

standing who Pomological Soc

PRESIDENT able information failed.
