

quently walked, in one day, from Ryerson to Rosseau, a distance of twenty-seven miles, and quite recently, he walked from Ryerson to Burk's Falls and thought nothing of it. He stands 5 feet 11 $\frac{1}{4}$  inches in height, and is nearly up to his average weight of 150 lbs. Until a year ago he could read ordinary print without spectacles, and his hearing is yet very fair. Dr. Taylor has always eaten in moderation of mixed plain food from the animal and vegetable kingdom, but avoided pastries, confectionery and such like. He has ever looked on the bright side of life; never desponded, and has decidedly kept, as he says, a 'stiff upper lip.' He drank moderately of wine and pure liquors in his earlier years, but latterly, for many years, has drank no alcoholic beverage. His wife died twelve years ago, at 58 years of age, and was thirty years his junior."

The following is taken from the Huntsville paper, April 18, 1890:

"It has fallen to the lot of very few journalists in Canada to record the death of a citizen as old as the late Dr. Henry Taylor, who passed peacefully away to his long home on Thursday, the 3rd inst., at the ripe age of 100 years, 3 months and 3 days. The last days of his life were spent in Burk's Falls with his daughter, Mrs. Snyder. He retained a wonderful degree of physical and mental vigour until the end. He was a member of the Methodist Church for over forty years, and was highly respected, both in his profession and private life, by all who knew him. He leaves to mourn his loss, four sons and one daughter, viz.: Mrs. Snyder and Walford Taylor, of Burk's Falls; Wm. Taylor, of Ryerson; Samuel Taylor, in western Ontario, and James Edward Taylor, in Michigan, U.S.A."

---

DR. WALTER TELFER,

A Scotchman by birth and education, from Niagara, appeared before the Upper Canada Medical Board, July, 1833. He had a diploma of the College of Surgeons of Edinburgh, and obtained his certificate. But a correspondence found in the minutes of the Medical Board between Drs. Telfer, Muirhead and Porter, and the Medical Board, in October, 1832, shows that Dr. Telfer
