Farmers
USE
**STANDARD
POSTS**

YOU would laugh at a man who ran his farm with the methods of twenty years ago. Think of being without the labor-saving devices developed in that time. Think of the old plows. Try and imagine what it would be like to do without the cream separator, the gas engine, and all other labor-saving devices that now make farming so many times more profitable than it used to be.

And yet lots of farmers build fences in the expensive and inefficient **old** way—using wooden posts.

Farmers who have posted themselves on this fence question now use **STANDARD STEEL TUBE FENCE POSTS.**

Don't overlook the extra quality in **STANDARD WIRE FENCING.** This is guaranteed Govern-

ment Standard No. 9 Gauge Wire, galvanized in the best equipped works in Canada. It is the best in the world. You can buy it only from **STANDARD**. All prices are in fact, well known.

STANDARD
STEEL TUBE FENCE POSTS
AND WIRE FENCING

They know what a big job digging post holes is. But **STANDARD STEEL TUBE POSTS** need no holes. You drive them in as easily as you would a tent peg. Once in they are anchored for all time.

Unlike wood, they cannot rot, never burn and breed no crop-destroying pests.

They are firmer, stronger, lighter, and in every possible way better.

They cost you less per post to buy.

They cost you only one-third in labor to erect, for with a boy to help, you can set as many **STANDARD POSTS** as three men and a boy could set wooden posts.

You, too, should know all there is to know about Steel Fence Posts. So send for our special folder, which gives full particulars.

One of the exclusive advantages is our specially-

designed knot. We invented the original knot, which has been copied by nearly every fence manufacturer. But recently we invented an improvement on it which gives our knot a gradual curve that never injures the galvanizing.

We
Guarantee
Them Rust-proof.
