Nature's Laws Govern Prices

The supply of sweet butter in Winnipeg at present is light, many thousand packages short of the same period last year, and as a consequence we have a

DECIDEDLY FIRM MARKET.

We predict a higher range of prices next month and urge shipments. The same applies to freshly gathered Eggs.

Calgary Flour Mills.

An important change has recently taken place in the Calgary Milling Company (Limited), according to the Herald. The company has been strengthened by the addition of two more shareholders, Messrs. Prince and Kerr, who are already largely interested in local enterprises, and who together with the gentlemen previously at the head of the company should certainly succeed in making this one of the most important of Calgary's local industries.

At a meeting of the company the following directors were appointed: W. Carson, P. A. Prince, J. B. Prince, I. K. Kerr, F. H. Brown and T. G. Wanless. Subsequently a meeting of the directors was held, when the following officers were elected: I. K. Kerr, president; P. A. Prince, vice-president, treasurer and manager; T. G. Wanless, secretary. It is the intention of the company to run the Calgary flour mills to their fullest capacity the year round, and to increase the company's plant at Calgary and other places in Alberta as fast as trade justifies the expenditure. It is the expectation of the company to have a milling and elevator plant at Calgary of very considerable size in the near future, as well as a complete line of modern, up-to-date elevators in other parts of Alberta.

The power required to run the mills and elevator at Calgary will be furnished by the Calgary Water Power Company.

An electric motor has already been installed in the elevator to operate the elevator and chopper.

The company has an excellent trade connection all through the west which is rapidly growing.

Boundary Mining News.

On October 17, the Miner-Graves mines—Old Ironsides, Victoria and Knob Hill—increased their daily shipments to the Granby Co.'s smelter at Grand Forks, B. C., from 300 tons to 600 tons. This would have been done earlier but that the smelter was not ready to start its second 300 ton furnace, chiefly owing to not having sufficient coke on hand to make it certain that no stoppage would take place by reason of fuel running short. With 600 tons of ore going out daily from one group of mines alone, this giving a total of about 18,000 tons a month, and with the B. C. mine, in Summit camp, maintaining an average of 100 tons per day, or 3,000 tons per month, it will readily be realized that the ore shipments from the Boundary district will soon attain to considerable proportions. The total shipments from the whole district to Oct. 17 aggregates about 43,000 tons. It is estimated that the shipments from the Mother Lode mine to the British Columbia Copper Co.'s smelter, at Greenwood will, after December, average about 300 tons per day, and this added to shipments at above mentioned rate will give a total of 30,000 tons, to which will be added shipments from several mines not yet sufficiently developed to send out on a comparatively large scale. This showing for a district that has only now fairly entered upon the shipping stage is a very creditable one.

An erroneous statement was published recently respecting the smelters of the Boundary country. There is only one smelter in the district in actual operation—that owned by the Granby Consolidated Mining and Smelting Company, Ltd., of Montreal, Que., and situate at Grand Forks. The smelter of the British Columbia Copper Company, Ltd., of New York, is establishing near Greenwood, primarily for treatment of ore from its Mother Lode mine, is not yet completed. The buildings have been erected and part of the plant has been installed, but it is not probable that it will be possible for actual smelting operations to be entered upon until about the first of the new year. The Standard Pyritic Smelting Company, Ltd., of Quebec, has commenced the erection of a pyritic smelter on a site about three miles south of Greenwood, but it is scarcely likely that it will be practicable to treat ore at this smelter until early next year.

Mrs. Dresser—Do you think this dress is long enough behind, Jack?
Mr. Dresser—Plenty! Any microbes that can escape that isn't worth catching.—London Modern Society.
