COPY TO MR. MATTHEWS:

SAW Br. PERCIVAL this morning.

He first took up the matter of the results in Chemistry, pointing out that while Professor Evans had failed nearly forty per cent. last year, this year he failed only 4%. Such a result strikes Percival as peculiar, though I can see nothing wrong in it. Evans assures me that the paper may have been a little easy, but he could give no less marks.

The Senior Leaving Board met last night and accepted the marks.

2. Then he brought up the case of Intermediate Geology, a paper prepared and examined by Tate. At the time the Senior Leaving Board went over the paper, they thought it was a little hard, but they decided to let it go. There have been many failures, and in consultation with Tate it was suggested that the marks be raised a certain amount.

However, the Senior Leaving Board decided to let them stand.

I think both decisions were wise.
