

The Wm. Hamilton Mfg. Co., Limited

Builders of a Complete Line of

SAW MILL MACHINERY

This cut illustrates our Double Cutting Weight Tension Band Mill

It shows the same good quality of workmanship that has made our machinery the standard for saw mills.

The top wheel is supported from above and guided below, which does away with all vibration of the wheel. Besides, sawdust cannot in any way interfere with the action of the adjusting and tension devices.

Saws can be changed on this mill quicker than on any other weight tension mill.

Send for our catalogue giving full information.

Along with this Band Mill, every saw-mill should have our

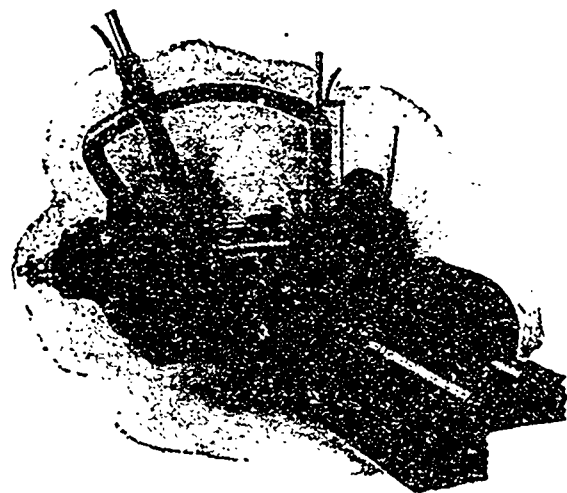

Improved Steam Setting Machine

It sets up to 4 inches, besides saw kerf, with one throw of the lever.

By its use, your daily cut can be increased easily 3000 feet, and the quality of the lumber greatly improved.

May we not send you a copy of our new catalogue illustrating this machine?

If you require anything for a saw-mill, write us—
You should use our machinery.
