

What dost thou here ! long winter bird,
Why linger here so long ?
Methinks there's much of scrow heard
In thy faint, whispered song,
Lone relic of a splendid race !
Earth has for thee no dwelling place.

To remove the musty flavor from Wheat which has been damaged.—An English receipt book directs as follows : For every bushel of wheat take two pounds of potash, dissolve it in water with about double the quantity of wheat. Let the wheat be thoroughly washed in the solution, rinsed with pure water, and dried quickly.

In a letter to the Right Hon. Sir Joseph Banks, it is observed, "if wheat be musty, it must be put into any convenient vessel, capable of containing at least three times the quantity, and the vessel must be subsequently filled with boiling water ; the grain should then be occasionally stirred, and the hollow and decayed grains (which will float,) may be removed. When the water has become cold, or in general when about half an hour is elapsed, it is to be drawn off. It will be proper then to rinse the corn with cold water, in order to remove any portion of the water which had taken up the must ; after which, the corn being completely drained, it is, without loss of time, to be thinly spread on the floor of a kiln, and thoroughly dried, care being taken to stir and turn it frequently, during this part of the process."
