buttons, the trimmings are never cast aside with the old waist, as they are with other

stood by ordinary French persons as they are not by the professionals of America nd a general freshness of effect is the result. It is said that less glass and china is broken in France than elsewhere, but if it is broken the owner generally knows/ how to mend it, wonderfully; or if it cannot be mended she sighs, shrugs her houlders and forgets it. French women do not "nag" or "worry." They are nomical of their spirits, as they are of their beauty; and a French woman who nas a fine eye, fine hair, or good teeth, can force you to call her beautiful If she is actually ugly she will so bewilder you with her toilet, her gestures and her smiles that you cannot find it out. If she is old she

can still be charming.

Machine-Work. BY BISHOP CLARK, OF RHODE ISLAND. Weaving has been done by machinery, and possibly some other things, ever since it has done in the way of superseding hand-It has been computed that the power labor. Let me enumerate a few of the improvements that have been made within suffice to raise from the quarries and my own recollection. I remember the ticked in the world was made by hand, Experiments have been made with and no wonder that they were expensive compressed gunpowder, made to fit the luxuries. Each of the tiny screws had to drill-holes and cut into short lengths. be turned, and every cog in every little wheel measured off and cut by itself, and It was found to possess many advantages every part carefully adjusted to fit every the complicated workmanship might utter-The evil effect of the electric light | ly destroy the value of the article. Clocks upon the eyes is due, it is supposed, to and watches have now ceased to be the the constant changes in the intensity of luxuries of the rich, and the products of the light, whereby the eyes are greatly our American manufactories have taken

I have often, in my boyhood, watched the slow process of making a silver spoonof some insects is almost incredible. It the gradual drawing of the bar of metal to has been estimated that the common the proper length, the hammering it into has been estimated that it must house-fly moves its wings 330 times in a second, or 19,800 times per minute, have taken a full day for a man to get up to the second of th while the butterfly's wings move nine times per second, or 540 times per minute.

have taken a unitary to a mark they are tumbled out of the machine with marvelous rapidity, and if a cheaper metal is used

I remember when it was said that it between the remarkable electrical phe- took seventeen men to make a pin, and nomena lately observed all over the the head-which was made by twisting a world and the excited condition of the fine wire around the end of the pin-was without the touch of a human hand-the cutting, head-making, pointing, polishing, seen ere the close of the present sumeven sticking of the pins into the paper

by machinery. I remember when every boot and shoe found coal-dust to be an important worn in the United States was made by factor in explosions of the gases in hand; all the pegs and nails being driven mines. A mixture of coal-dust and air in one by one, and each stitch requiring is not explosive, but a quantity of fire. | the preliminary prick of an awl and the damp too small to produce any effect careful insertion of a bristle attached to when mixed with air alone, causes the the waxed threads, each of which must then be pulled tight by hand, while the Prof. Abel's experiments show that any kind of dust mixed with air containing would suppose to be conducive to mental a small quantity of fire-damp converts activity, wore away the weary hours in

"Of providence, foreknowledge, will and fate, Fixed fate, free will, foreknowledge absolute; And found no end, in wand'ring mazes lost." employed turpentine vapor in the treat- At this period, the man who should underment of whooping cough.
