New Brunswick Cotton Mills, SAINT JOHN, N. B.

THE WEEKLY TRIBUNE,

A 42 COLUMN PAPER!

Best in the Maritime Provinces! Only One Dollar a Year!

Simple Copies Mailed Free.

The Daily Tribune.

J. L. STEWART, EDITOR.

MONDAY EVENING, DEC. 22, 1873.

This is the natal day of THE DAILY TRIBUNE. We enter on our third year with largely increased circulation and revenues.

Our success has justified the most sanguine friends of independent journalism, and silenced the carpers who tried to smear their rival down.

A few months ago new type was procured for our reading matter, and now we rejoice in a new suit of advertising type.

THE TRIBUNE will be behind its contemporaries in no respect, and will be ahead of them in as many respects as possible.

Howard Glyndon, the writer of the article entitled "Hypophosphites" which we transfer to our columns from the N. Y. Evening Mail, is one of the rising prose and verse writers of the United States.

Her real name is Laura C. Robbins, and her collected poems "Sonnets from Secret Chambers," have been most appreciatively received by the critics and the reading world. Her history is peculiarly interesting, as she has had to overcome the disadvantage of utter deafness in her brave struggle for a place among the poets and prose writers of America. The Mail is the best literary paper in New York, and Howard Glyndon is its most valued contributor. The author and the journal it appeared in are above the suspicion of having been paid for the article. We publish the article because it gives, in a pleasing way, much instruction on a matter of public interest, and because it reflects great credit upon an enterprising townsman of whom St. John may well be proud.

Judging from "H. S." in today's TRIBUNE, the next session of Parliament will be fully as lively as any previous one. His statement of the facts is a satire on the party doctrines as been and later as Mr. Jenkins's arraignment of the reform obstructives of England. On every hand we see the men who lately boasted of their disinterested patriotism grabbing for office and honors and patronage; and even the Premier seeks to enrich himself by openly jockeying hand and maling companies that must depend for their success on the policy of the Governments which he and his friends control. Sir John A. Macdonald was never even accused of using his power for personal gain. He didn't seek to enrich himself.

Now that George Brown has been provided for, and Mr. Penney of the Montreal Herald (the publisher of the stolen letter) is to be rewarded, the third it about time that the Reform editors in the Maritime provinces were attended to. Surely all the spoil is not to go to Toronto and Montreal. Mr. Blackadar of the Recorder, Mr. Fielding of the Chronicle, Mr. Fowler of the Citizen, Mr. Lawson of the West Coast, and others of less importance, do not expect Senatorships, because there are no vacancies in this quarter, but vacancies in the Departments might be made for them, or Emigration agencies created for their benefit.

The Quebec baristers are in trouble. A vicious system, inherited from the French, of taking evidence, whereby cases are indefinitely prolonged and the physical and mental infirmities of the judges of the Supreme Court, have combined for delaying business to an unbearable degree. The Chief Justice is an invalid, unable to attend his duties half the time; Judge Bradley is as deaf as a post; Judge Monk is charged with corruption or gross favoritism; and there are only two other Judges. The invalids should be pensioned off, the suspected one indicted, and the vicious French system of taking evidence abolished.

The Virginia question is still a cause of agitation. The United States, having obtained the captured steamer, are beginning to inquire whether they are entitled to her. If the Virginians were not so entitled to carry the American flag, she should be returned to the Spanish authorities. The probability is that, if the passengers and crew of the Virginia had not been so inhumanly treated as to deprive Spain of the sympathy of the civilized world, the Virginians need never have been surrendered at all, as her true character and real ownership were well known to the Government and people of the United States. Spain may thank Butcher Burrell for the humiliation she has been forced to submit to.

The Head Quarters want to know if it would not be as well, when the Governor's party is late at a lecture, to refrain from a demonstration upon its entrance, especially if the lecturer is speaking. We should say that the man, or child of more than two years, who would participate in such a demonstration at such a time, should be seized and sent to the Lunatic Asylum without a warrant from a Justice of the Peace, or a certificate from a physician.

We have seldom had to record a more disgraceful act of petty official meanness and tyranny than is exposed in our Ottawa special. The Ministers of the Crown have descended from their positions to interfere with a municipal election. These stalkers for the free exercise of the franchise threaten to dis-

the civil service clerk who votes except as he is bidden, and make an order preventing any, except those who will vote as required, to leave their desks until after the poll closes! It is shameful!

"Under the Evergreens, or a Night with St. Nicholas," a story by George C. Lorimer, and "Little People of God and What the Poets have said of Them," a collection of poems by Mr. George L. Austin, are two gorgeously but inexpensively bound gift books from the press of Shepard & Gill, Boston. Both books are illustrated by leading artists, their contents are pure and pleasing, and the typographical appearance perfect. For sale by Messrs. J. & A. McMillan.

Reporters seem to escape, in some marvellous manner, the averaging bullet, knife and slug-shot of exposed villainy Col. Tyrrell, of the Cincinnati Commercial, is not so fortunate as his fellows, as the son of a defaulting Kentucky magistrate, whom Tyrrell hates, that his life is in danger.

Hypophosphites.

The above is not an encouraging header for an article, as average readers go; but I beg that nobody will skip it on that purpose to dissect that dreadful word - crack that hard-looking nut, and show what a magnificent fife is hidden under its rough and prickly shell.

To begin, we shall fracture it right across - almost in the middle - and see! We have dissected two words, the one phos, the other semi-scientific, which were so welded together as to make apparently but one. Let us leave Hypo, which is a variable cheap and a sort of off-trader, for the present, and pay our respects to the family of Phosphites. It is formed by a combination of phosphorus with a salifiable base, in a chemical process, which is a matter of public interest, and because it reflects great credit upon an enterprising townsman of whom St. John may well be proud.

Preparations of hypophosphites have been used by some of the most eminent and scientific people for the last few years, and with the most successful results in a vast number of cases. They are, however, not so well known in the United States as they are in Europe, and it is to remedy this that we are publishing this article. The first of which is a bottle of our own, containing two to three dollars. This is not a large proportion of our price, and it is to consider the costliness of the ingredients - far different from the cheap, artificial materials that are used in the preparation of the great body of cheap patent medicines which are the cause of disease, and which become dangerous only by slow degrees. The doctor is sent for, and pure medicines taken only when it is too late to save. But the second and most important reason for the comparative obscurity in which the most valuable discovery of the age for the cure of wasting diseases has been allowed to remain is the fact that, as a rule, only the most inferior preparations are known. When the ingredients are so expensive there is a temptation to adulterate them for the sake of large profits and to use inferior materials. It is to remedy this that we are publishing this article. The first of which is a bottle of our own, containing two to three dollars. This is not a large proportion of our price, and it is to consider the costliness of the ingredients - far different from the cheap, artificial materials that are used in the preparation of the great body of cheap patent medicines which are the cause of disease, and which become dangerous only by slow degrees. The doctor is sent for, and pure medicines taken only when it is too late to save. But the second and most important reason for the comparative obscurity in which the most valuable discovery of the age for the cure of wasting diseases has been allowed to remain is the fact that, as a rule, only the most inferior preparations are known. When the ingredients are so expensive there is a temptation to adulterate them for the sake of large profits and to use inferior materials. It is to remedy this that we are publishing this article. The first of which is a bottle of our own, containing two to three dollars. This is not a large proportion of our price, and it is to consider the costliness of the ingredients - far different from the cheap, artificial materials that are used in the preparation of the great body of cheap patent medicines which are the cause of disease, and which become dangerous only by slow degrees.
