

will continue to live and grow in popularity. Such a product is Hayden's Viburnum Compound.

H. V. C. is of known composition. Its reliability of action in treating Gynecological and Obstetrical cases, has standardized it as a dependable product, upon which confidence can be placed to produce the desired results.

In Congestive Dysmenorrhea and other forms of painful menstruation where no abnormal anatomical condition exists, it has proven of inestimable service, even since the time of Sims.

In Amenorrhea, Menorrhagia, Metrorrhagia, it is also of particular service. In Obstetrical practice, where difficult labor is encountered due to a Rigid Os, its sedative and antispasmodic action makes it almost indispensable.

Hayden's Viburnum Compound contains no narcotic and can be given with an assurance that no dangerous after-effects will be the consequence. Administered in teaspoonful doses in hot water, it will prove dependable in all conditions where indicated.

THE NEW TREATMENT FOR GONORRHEAL INFECTIONS.

Physicians who have had any considerable experience in the treatment of gonorrhea and its complications know how stubborn many of these cases are; how, not infrequently, they resist ordinary routine methods for weeks and months. The average general practitioner encounters these cases with unpleasant forebodings. He realizes that treatment of them is more or less empirical. He experiences a sense of relief when he can bid "good-bye" to one of them—when he can discharge it as "cured."

For the reasons enumerated any new therapeutic agent which promises a fair percentage of recoveries in gonorrhea and its sequelae is certain to be accorded a warm reception by the medical profession.

Is Gonorrhea Phylacogen such an agent? There is a basis for the belief that it is. Here are some figures that seem to lend assurance: "660 cases treated; 539 recoveries; 121 failures." These figures pertain to carefully recorded cases, under observation in various sections of the country and embracing both hospital and private practice. They include such complications as gonorrheal arthritis, chronic urethritis, vaginitis epididymitis, orchitis, prostratitis, vesiculitis, ophthalmitis, iritis, endometritis and salpingitis. These cases were reported to Messrs. Parke Davis & Co., producers of the Schafer Phylacogens. The results point clearly to this conclusion: Gonorrhea Phylacogen is worthy of careful, serious consideration.
