

# Simplicity

Each part a separate unit and easy of access in the new

## AULTMAN-TAYLOR 15-30 Kerosene Tractor

To get out of a Tractor the full value of the money you put into it, you must have simplicity and accessibility in every part of the machine.

In the new A-T. 15-30 Tractor each unit is built independent of the others. The units are then assembled and securely bolted into one compact, solid unit possessing all the advantages and none of the faults of a single casting.

A single casting consisting of motor-base, frame, gear and axle housing could be made and put into the tractor at a much lower cost but, in case of breakage of any part, you would have to buy a big expensive casting and dismantle and reassemble the entire tractor.

With the Aultman-Taylor separate unit construction, replacements of the damaged part only can be made at very low cost and without any trouble.

If you want a tractor that is easy to keep in perfect running order — a tractor built by people who have known for fifty years what the farmer needs and wants in farm machinery—Buy an Aultman-Taylor 15-30

Write for prices to-day; 1919 will see a world wide demand for real tractors and you may not get one later on when you need it most.
