

PUMPS! PUMPS!

It is almost twenty-three years since I commenced the manufacture of PUMPS in Peterborough, and I take this opportunity of thanking the inhabitants of the town and surrounding country for the very liberal patronage they have accorded me during that time. It has always been my aim to produce and introduce all good improvements in Pumps, and after a four years' trial of the NEW PATENT

MODEL FORCE AND LIFT PUMP,

which this cut represents, I believe it to be the BEST COMBINED PUMP IN THE WORLD. It differs from all others in having the sectional stock or head, with its many advantages, and its firm and durable means of holding the attachments. The intermittent or detachable packing is only used in actual forcing, and it is at all other times (say 95 per cent. of the service of the pump), unfreezeable and unwearable.

The Hose Coupling is very convenient and effective. It can be adjusted in a few seconds, thus quickly changing an ordinary service pump into a Force Pump.

The great advantage to the purchaser is that he possesses a first-class Lift Pump and a good Force Pump in one, as well as an excellent protection in case of fire, for the same price often asked for an ordinary pump.

WM. TULLY, North Monaghan, says: "I have had your Model Pump for a year. It gives me the greatest satisfaction, and is one of the best for watering Stock, as it is easy to work and draws a large quantity of water. I can recommend it as the very best I have seen."

"We, the undersigned, having examined Mr. H. Owens' New Model Force Pump, take pleasure in stating that we consider it a great improvement on pumps formerly in use. In our opinion it is one of the best pumps ever introduced to the public, being quickly turned into a pump for fire protection. It is powerful, durable, convenient, and easy to work, and it gives us pleasure to recommend it as a first-class article in every way."—William H. Law, Geo. Hilliard, Richard Hall, Wm. Hamilton, Wm. Bradburn, J. Stevenson, T. Bradburn, William Morgan, William Logan, J. Carnegie.

I am also AGENT for THE CHATHAM FANNING MILL,

Which has been before the public for the past 3 years in this section. It is greatly improved for this season. For these Mills I claim as follows:—1st, fast cleaning; 2nd, light running; 3rd, superior separation; 4th, effective removing of chaff and cockle; 5th, strength and durability; 6th, low and handy to get grain in. Farmers wanting a mill this season should not fail to call and examine the Chatham Mill at my shop, at any time.

HENRY OWENS,

MANUFACTURER,

CORNER OF WATER AND SIMCOE STREETS, PETERBOROUGH.
