

New Building for Canadian Westinghouse Company, Hamilton, Ont.
Bernard H. Prack, Architect and Engineer, Toronto and Pittsburg.

Built for Results

When the new office of the Canadian Westinghouse Company was planned, the first thought was that of results. Equipment which would give the workers greater opportunities for doing their best and conditions to make this work a pleasure were included in the finished job.

The heating and ventilating equipment was an important point for getting results. The health and working capacity of the office employees revolved around this point. "Sirocco" equipment was used because of the reputation gained through its use in a large number of prominent Canadian buildings. "Sirocco" equipment is giving, and will continue to give, the best of service in the new Westinghouse Office building. In winter, heat is furnished from heater coils and fans, in summer, the air is purified and rendered cool by the "Sirocco" process.

If you have any ventilating or heating problems to consider, we would like to get in touch with you.
