

To Pull 'Round Turns in Pathless Woods

Ability to take sharp turns in winding roads makes the Monarch Tractor particularly suited to the requirements of lumbering. The Monarch turns in its own length.

It lays its own track as it goes—broad manganese steel chain traction belts—that gives it firm footing on any surface.

A winch used to replace the regular power belt pulley enables the Monarch to be equipped as a travelling power crane, which in loading and other similar work effects numerous savings in operating costs.

In deep sand, over bogs, on snow and ice, its weight is distributed as though borne on a platform.

And these broad treads grip the ground over an immense surface.

The Monarch is economical to operate, for its fuel is coal oil, but gasoline may be used if desired.
