#### HAMILTON EVENING TIMES, SATURDAY MARCH 20 1909.

**THE HAMILTON TIMES** SATURDAY, MARCH 20, 1909.

#### THE NEW EVIDENCE.

The testimony of the witnesses at the nurder inquest last night furnished little that was sensational. Three ladies told of seeing a man in the alleyway near the Kinrade premises about the time of the murder. It is just possible that their evidence may have an important bearing upon the case, but as yet it does not much promise of shedding light give apon the mystery. The testimony of the sses who say they saw Ethel Kinrade in Herkimer street at 3 o'clock is apparently regarded by the authorities as of considerable importance. If these witnesses did not mistake the person whom they saw, it would appear that Fthel Kinrede, instead of preparing to go out at the time she was shot, had probably just returned to the house. The miles of canal cutting; that the natural nedical evidence definitely establishes that seven shots fired took effect in the and French Rivers is more than ample body of the murdered girl. It had been to meet all the requirements. It rece thought by many that eight bullets mends ordinary lift locks of concrete struck her, but the physicians say that Eighteen main dams will be required, the two scalp wounds were made by one missile. The fatal wound was a bullet through the heart. A very important part of the testimony of the physicians was that a considerable time-probably ten or fifteen minutes-elapsed between the wound in the head and the fatal wound through the heart. The blood on the floor came from the wound in the scalp. Dr. Edgar estimates that six canal excavation, sixty-six miles of chanunces of blood flowed from that wound, nel dredging, 346 miles of river and lake and a calculation of the capacity of flow of the blood vessel from which it exuded that there are 116 curves of which sevleads him to think that the girl lived for enty-seven are of about one mile radius wound before the fatal shot through the half that radius, that the probable time heart was fired. Obviously, this testi- taken by a lake freight boat of 12-mile of the first importance in considering theories of the murder. If we ssume that an interval of fifteen minutes elapsed between the first shot, that the season of navigation will averwhich rendered the girl helpless, and the age 210 days, from May to November. last series of shots fired into her breast, we must abandon many of the theories that have been advanced to explain the crime

Aside from these features, the inquest yielded nothing worthy of special remark. Mr. Thomas Hobson and Mr. Lynch-Staunton, representing George the Kinrade family, were present last want any more white elephants of the night, and are lending their efforts to Intercolonial kind. clear up the mystery. There is no re'an ation of effort on the part of the Crown to probe the matter to the bottom, and the adjournment of the inquest till April 22 may be taken as an indication that portunity is to be given the detective department to obtain new clues and new evidence, and to thoroughly in- experience of Germany vestigate every circumstance and every or that may give the slightest promise of results.

### **REPRESENTATION.**

An old and far-from-settled question was brought up in the Commons on Monday by Mr. Monk, when he introduced a resolution declaring in favor of First smelter proportional representation and urging Ore loaders Unloaders the appointment of a committee to conthe matter. The question is an port is interesting one, and one that is not very easy of solution. On various occasions the Times has discussed it, pointing out the hardship which minor. Second men Third men pointing out the hardship which minorities always feel in being practically denied representation, or, at the best, being given far less than their numerical Core makers sortance would appear to warrant. Laborers The difficulty is one apparently inseparable from majority rule; and in the present state of affairs majority rule seems to be the only practical principle which our democracy can be upon founded.

But while we all concede that the will of the majority should predominate, most of us will admit that any system which would give importance in the and steel vockers when the predominate, which would give importance in the which would give importance in the councils of the nation to each division or marty according to its strength in 091, were \$344.62 a year. It is hardly or party according to its strength in the country, would be welcome. The probable that the Canadian employees have from time to time been suggested have all been marked by much difficul. fiscal system intended to bring about ty in operation, and the mass of the people seems to have felt that it was better to bear the ills it suffers under the simpler system than to invoke further difficulty and confusion by introducing additional complications. We have all felt that the majority system of electing Parliamentary repreentatives frequently involves who disfranchisement. Here, and to-day, the Liberals suffer; there, and to-morrow, the Tories not unjustly complain. The evil is aggravated by the multiplication of constituencies which have too often been gerrymandered to place one party of spending a lot of money in fighting at a disadvantage as compared with the to escape its duty in that regard. other. The simple majority vote lends itself to the purposes of the gerrymanderer. We do not need to cite instances in illustration. The records of every general election go to prove that a should rise above the endeavor to prostitute our system of representation to cheat their opponents by carving constituencies and by such tricks of political fence and dice-loading as were recently witnessed in dealing with the local representation of Toronto and ne of the other constituencies of the Province. Our present system, well operated, would give better results than it gives. If, however, a Parliamentary inquiry into the matter will lead to the discovery of a practical means of imment, nobody, least of all the Liberals, will object to its adoption.

GEORGIAN BAY CANAL. The board of engineers of the Georgian Bay Canal has prepared a report and a of estimates of the cos of th scheme to be presented to the House of Commons. Much time and money have been spent in obtaining the data upon which the board bases its conclusions. The board thinks that for \$100,000,000 a 32-foot waterway for the largest boats can be built and that the annual maintenance would be about \$900,000; that the distance from Montreal to' French River village is 440 miles. The rise can be overcome by twenty-three locks ranging from five to fifty feet. The descen

from the highest point to Georgian Bay would require four locks with from twenty-one to twenty-nine feet of lift. The board thinks that sufficient water may be easily stored to operate a summit level above Lake Nipissing. It estimates that to use the lake as a summit would increase the cost by at least \$10,-000,000 and introduce twelve additional low water flow throughout the Ottawa some of considerable size and quite expensive. The scheme contemplates excavated channels with sides showing above water should have a minimu width of 200 feet at bottom with marking piers at intervals and that the mini mum depth throughout should be twenty-two feet; that the project presented contemplates twenty-five miles of the with a width of 300 feet to half a mile; maximum speed without delays at locks or in meeting other boats, from French River to Montreal would be 70 hours; It would thus appear that the board expects the canal to be operable for seven months of the year. The enornous amount of money required for the carrying out of the scheme makes it ad

visable for Parliament to give it the most careful consideration before committing the country to it. We do not THE GERMAN STEEL INDUSTRY

Workingmen who have been appealed to to support a high protection system on the ground that it means increased wages to labor, and who have had the presented as bearing out this claim will probably be interested in comparing the wages paid in the German iron industry with those in other countries. At Dortmund one of ilton in recent years has been the Cat-SCHEME FOR PROPORTIONAL the largest plants returns its daily wage

In the Dortmund district, where a wages paid in the mines in 1908 were as follows, per shift: Miners, \$1.43; other underground workers, 97 cents; overhead labor, 93 cents. The working day in the mines is 11 hours; in the mills 60 hours ing attention with Hamilton. of the iron and steel industri hibit any burning desire to support a that sort of thing.

dependent families whose heads Chief ustice Mulock was called upon to punish for crime. He's a man with a heart We all thought it was going to b ich a fine thing for the Province that Ross discovered the rich mineral and agricultural northland, and adopted the policy which opened it up. It appears

that we made a slight mistake. The "good thing" turns out, under Whitney's administration, to be for the political grafters, speculators and railway promoters! Joe' Martin said in Vancouver at a ecent banquet that Mr. Sifton sent \$60,000 to a committee of three, whose names he alleged he could give, to defeat the Martin candidates in that Province

Mr. Sifton emphatically declares that the statement is entirely untrue and without the slightest foundation. Now let Mr. Martin produce his evidence, or apologize. Ald. Allan says the Beck bill providig that no contract made by a munici-

pal council which affects public utilities rights on the streets, or the supply of water, gas, light or power, shall extend over more than a year, is "an outrage." Perhaps that is too hard a erm. It is part of the penalty which the people pay for placing in power peanut politicians with personal ends to serve. It is besotted folly.

----Hon. Dr. Pyne and Deputy Minister olquhoun were the guests of the Hamilton School Board yesterday, inspected Normal School, and visited the Sophia and Picton Street Schools. Minister was expected to say something about the "great Provincial Technical College" which Hamilton was promised as a solatium for being robbed of the Normal College, but, although he did some talking, he carefully refrained from mentioning the matter. Could none of the trustees find it in their hearts to jog his memory?

Toronto contemplates another turn of the tax screw in order to keep up with her spending departments. This time \$60,000 a year is to be added to the burden of "the ordinary water consumers," the manufacturers being supplied at 5 cents a thousand gallons-12-5 less than actual cost of pumping. The city treaser says the waterworks instead of being a source of revenue, as ownership-

pers have delighted to tell us, shows a deficit, and nothing is allowed for depreciation of plant. But if more taxes are needed, why not raise the tax rate. instead of laying the burden on the water users?

question ranks a close second in sacred ness to the beard of the prophet. LIQUOR AND POLITICS. (Brockville Recorder.)

(Broekville Recorder.) The Conservative patronage commit-tee in Hamilton are worrying over the appointment of a license inspector for that city which is but another evidence of Mr. Whitney's insincerity in the mat-ter of civil service reform. He was to take the question of the administration of the license law ont of the realm of politics entirely, but the situation is just as the Recorder has always Said that the present Provincial Government never makes a move without first tak-ing into consideration the probable pol-itical result.

LAW AS TO BAR-ROOM. To the Editor of the Times:

To the Editor of the Times: Sir,-To settle an argument please answer the following query: Is it against the law for a hotel proprietor to enter his bar room during prohibited hours? Fo instance, may he go in and sit down and read. My interpretation of the law is that so long as a man does not dispose of liquor in his bar room he can enter it at any time. And oblige. An Old Subscriber.

r pea-ta to IChap. 47, Sec. 56, of "An Act to Amend the Liquor License Laws, sta-tutes of Ontario, 1906, declares that no one can enter a bar-room during prohib-inister Ham-liy or household (other than a lodger, boarder or guest), or a servant or em-ployee of such keeper, actually engaged in necessary domestic occupation or ser-tive within the said bar-room; or any person lawfully engaged in receiving or person lawfully engaged in recei supplying liquor which might 1 be sold during said prohibited ich might lawfully hours such as serving liquor, on a medical certifi

Tifficate. This would show that the proprietor or any of his family can only enter the bar room during prohibited hours, to clean up and such like or to sell liquor for medicinal purposes. To open up for any other purpose would be illegal.— Ed. 1

#### MOULDERS' WAGES.

the constantly increasing demands of To the Editor of the Times: To the Editor of the Times: Sir,—Would you grant me the neces-sary space in your widely circulated paper that I might put before the pub-lic the facts that exist at present with reference to the moulders' claims. I have read in the press this statement that the stove manufacturers of Hamil-ton have been paying a bonus of twen-ty-five per cent, on the dollar's worth of work made per week, and that they, the manufacturers, will not in the fu-ture pay this bonus or prenum, only ture pay this bonus or premium, only the even dollar when made, without any of the above added to it. I wish to ex-plain that the stove moulders of Hamplain that the stove monifers of Ham-niton, with few exceptions, all work piece work. In some moulds there is only one piece of stove plate, in others a number of pieces, according to the size, and each of the castings has its own price, and in fixing the price the representative of the firm, with a com-mittee of the moulders, meet and ar-range at what rate each piece shall be made. Now, a few years ago a commit-tee of moulders met in conference with the stove manufacturers to discuss the wage question and to endeavor to get an advance in the price of stove plate being made by moulders. The moulders pointed out that owing to the increase in the cost of living an advance in in the cost of living an advam wages was only reasonable. This manufacturers agreed to do, and it arranged and clearly understood instead of putting the advance grant on each piece of stove separate

on each piece of stove separat moulders would receive twenty-five ratel at that time, so that whether a ha at that time, so that whether a half day's work was turned out or a number of days, the moulders received pay at this rate, which I claim is not a bonus or premium, but a fixed price on each individual piece of stove plate. This re-duction in wages which the employers demand is very unreasonable, in the face of the fact that the cost of living is just as high, with a tendency to go up higher. Thanking you for this priviup higher. Thanking you for this privi-lege.
