Kid Gloves,

\$1.70 to \$3.00 pair.

MAIL ORDERS received Prompt, Efficient Service when entrusted to us.

Youth at a Price.

Monkey Gland Operation and Pneumonia.

(News of the World Special.)

The danger of putting new wine into old bottles is exemplified by the case of a distinguished public man who, who recently died after a monkey gland operation. The immediate cause of his death was pneumonia, which might, of course, have arisen from any other operation. At the same time it is significant for those who are meditating rejuvenating operations to recall that in 1921 a man, aged 70, was advertised to speak at the Albert Hall on "How I was made 20 years younger by the method of Dr. Steinhilber, of Vienna." The method, it may be explained, differs from the monkey gland treatment and consists of ligaturing certain ducts. This man likewise died from pneumonia on the day he was going to deliver his lecture. It is, however, interesting to note that Dr. Leonard Williams, the well-known London physician, had stated that the operation of grafting the monkey gland in the human male has been followed by uniformly successful results. He says it is not a case of putting new wine into old bottles, and Voronoff's results—Voronoff being the inventor of the monkey gland operation—now suggest very strongly that this brand of new wine rejuvenates the very bottles themselves.

GLAND PIONEER DEAD.

One of the first patients to undergo Dr. Voronoff's monkey gland operation for rejuvenation, Mr. Arthur Evelyn Lister died at Carven, Hill, London, where he kept a private hotel. It was in 1920, when he was 74, that he heard of Dr. Voronoff's treatment. He was then bald, had walked with faltering footsteps, his face was seamed and wrinkled, and his cheeks pendulous and flabby. On February 2, 1921, Dr. Voronoff operated in him the gland of a monkey. The operation was reported to be extraordinarily successful. In less than a year his head was crowned with a growth of luxuriant hair, his tissues were firm, the skin soft, and he walked with a firm step, and carried carriage that astonished the doctors. Last year, at the age of 78, he attended a meeting of Harley Street specialists to prove the efficacy of Dr. Voronoff's treatment. He astonished the doctors. They punched and prodded his biceps, which were as hard as those of a prize-fighter, and he simply smiled. Then, in return, he gripped the hand of a famous specialist with such firmness that he made the surgeon wince with pain. His rejuvenation was declared complete. It was the consideration of the specialists that the operation had transformed him from an old man to the activity of a man in the prime of life.

Sheepskin Measures Gas

LITTLE KNOWN FACTS ABOUT OUR GAS SUPPLY.

The story of gas is a fascinating one. It is as an illuminant was discovered by William Murdoch, a Scotsman, in his father's cabbage garden. There happened to be an outcrop of Scotch shale, and with this he experimented, using his mother's tea-cup for a burner. Subsequently, young Murdoch was employed by Watt, the famous inventor, and he owed his father's name to a billycock, and the youth carried it on the back, attracting

Watt's attention by the curious sound it made. The hat had been turned out of an old log of wood, and Watt was so struck by the fact that he gave Murdoch a job—at five shillings per week!

The First Gas Lamps.

Murdoch continued his experiments, at last erecting a plant to illuminate the engineering shops.

Winnor is the next name that stands out among the many associated with the introduction of gas lighting. This man took the Lyceum Theatre for his demonstrations, and at last, after many

efforts, he obtained a charter from Parliament to light a portion of London. The first lamps were erected in 1807, in Pall Mall. In 1817 Winnor formed the Chartered Gas Company, the forerunner of the well-known Gas Light and Coke Company.

Since those days inventions and improvements have been unceasing, with the result, among others, that the cubic foot of gas, which yielded Murdoch less than one candle-power of light, now yields the consumer a full sixty candle-power.

Gas Inspectors on the Prowl.

In the early days of gas, we are told

in "Teachers' Notes for Lessons on Gas," there were, of course, no meters. Inspectors were appointed to go round the streets at night-time to see if any consumers were using their gas out of contract hours. To do that was a serious offence against the law, punishable by heavy penalties. In place of the prowling inspector we now have a meter to govern the contract—and the important part of the meter is sheepskin!

Nothing is wasted in the production of gas, and a ton of coal treated in a gas-works yields 487 lbs. gas; 1,422 lbs. coke; 173 lbs. tar; 27 lbs. of valuable sundries, and 255 lbs. of liquid from which fertilizer is prepared.

Ladybirds are systematically bred in Italy and France to produce the larvae which destroy insect pests of the vines.

bragmas, which have been treated with almond oil to keep them flexible, expand and contract as the gas is used, meanwhile acting upon spindles governing the index-figures on the face of the meter.

Nothing is wasted in the production of gas, and a ton of coal treated in a gas-works yields 487 lbs. gas; 1,422 lbs. coke; 173 lbs. tar; 27 lbs. of valuable sundries, and 255 lbs. of liquid from which fertilizer is prepared.

Formidable Weapons of New War Vessels.

Britain's New Battleships, the Nelson and the Rodney, will each mount nine 18-inch guns in triple turrets, a new form of mounting, says a London report. Each of these giant guns will be capable of hurling a shell weighing approximately 2,500 pounds. In the U. S. and Japanese navies there are ships mounting guns of 16-inch calibre, but the Nelson and Rodney will form an unique type because they will carry nine guns of this size instead of eight mounted in foreign warships. The reason for introducing the triple turret is the necessity for economizing in weight owing to the restricted displacement laid down in the terms of the Washington agreement. Triple turrets were first used in the British Navy two years ago when they were temporarily fitted on a monitor which bombarded the ex-German battleship Baden during a series of experiments. Another feature of the new battleships will be special anti-flash arrangements, which are a closely guarded secret. They will embody the lessons of Jutland where some British ships were sunk

owing to shell flashes penetrating to the magazines.

Funny Men of Sport.

PLAYERS WHO MAKE THE CROWD LAUGH.

Which game affords most scope for the display of a sense of humour? Probably most people, after considering the question, would plump for cricket, which boasts among its leading exponents several men whose play is a source of merriment to the spectators.

Takes, for instance, the famous Surrey wicket-keeper, when he takes the field those onlookers who know him of old invariably settle down to the humour. The English game like those of the continent, of football and tennis, and of the various indoor games, is a game of strategy, and the players are expected to be serious. In the case of cricket, however, the players are expected to be humorous. This little trick never fails to draw roars of laughter, in which no one joins more heartily than Hendrent himself.

Curiously enough, tennis, the most popular of all outdoor games, has very few "tip-top" devotees who play suggests that they have a humorous bent. Probably this is because first-class tennis is nearly always very fast.

Now and then, however, a school of humour creeps into the game. Norton, for example, can be quite funny when he is in the mood. A well-known trick of his is to pounce in the manner of Suzanne Legien, while often he makes—on purpose—comical grimaces at his opponents, as well as at friends watching the play.

Mishu, the Rumanian player, who is often seen at Wimbledon, has a habit of occasionally serving the ball from behind him, between his legs! This always draws laughter.

Among footballers, "Fanny" Walden is one of the most popular humorists on the field. He is the Little Tich of the game, and shouts of mirth go up from the stands when he is performing. To see him twinkling across the field in chase of a player twice as big as himself is rare fun, and "Fanny" knows it!

Even bowls has its humorous aspect. There is one well-known player who is famous for the coaxing way in which he tries to place the "wood" near the jack, talking to it as lovingly as if it were a child.

First-class golf and billiards, on the other hand, seem strikingly devoid of humour.

It needs a lot of hard thinking to recall the name of a single leading exponent of either game whose play can be said to have in it even a touch of "the saving grace."
