America, may be admitted into this Province Free of Duty, upon proclamation by the Governor in Coun-sil, whenever satisfactory arrangements shall be en-tered into with the United States for the importation of similar articles from Canada into that country.

SCHEDULE II. Table of Prohibitions.

The following articles shall be prohibited to be imported under a penalty of two hundred dollars, together with the forfeiture of the parcel or package of goods in which the same may be found, viz Books, Drawings, Paintings and Prints, of an immoral or indecent character; Coin, base or counteriett.

SCHEDULE I. Export Inty

Saw-Logs and Shingle bolts of pine or spruce exported out of Canada, except the same be exported directly to any of the British North American Provinces:

On every one thousand feet, board measure, Pine 81 O ___ do

THE CROPS.

The ingathering of late crops has been a very serious undertaking this year in consequence of the unprecedented wetness of the season. For the last twenty-five years there has probably not been such a wet, uncertain harvest. There has been one thing in its favor, that it has remained affer the rains almost invariably cool, otherwise there would have been much sprouted grain.—Brantford Courter.

The Court of the Courter.

The Chors.—It is feared that the te heavy rains will do some damage to the barley crop and other grain that is ripe. The hay will also suffer a little. The prospects of a bountiful yield are, however, still encouraging.—St. John's News.

encouraging.—St. John's News.

The harvest in this county is nearly finished, and, so far as we have been able to learn, the yield exceeds anything we have had for eight or nine years past. The hay crop is unusually large, and it would not be surprising it the average price during the winter did not exceed \$57 or \$8 per ton. Oats, barley, and spring wheat have turned out unusually well, and the full wheat will be nearly an average crop, notwithstanding the ravages of the hy in some sections. Corn and root crops also promise well. In all parts of the country the yield has been unusual, so that prosperous times seem to be in store for us. A very good idea of the extraordinary prosperity enjoyed by the farmers of this country may be formed from the fact, that between 140 and 160 reaping and mowing machines have been sold here this season.—Cleatham Banner.

The late refreshing rains have had a very beneficial

The late refreshing rains have had a very beneficial effect upon all growing crops, which look exceedingly promising. A recent trip in the township convinced us that vegetation is maturing fast, and we shall soon hear the cheerful swarth of the seythe and the merry sound of the reapers gathering in the abundant crops Some of our farmers informed us that they should commence having next week.—Granby Gazette.

commence having next week.—Grantly Gazette.

A large part of the barley in this section has been cut, and promises splendid returns. The fall wheat is also being hare ested. The comparatively cool weather of the past week has calmed the apprehensions of the farmers respecting the rusting of spring wheat, now rapidly approaching maturity, and promising great results. Corn and roots have a splendid appearance.—Cobourg Sun. -Cobourg Sun.

The land, after leaving Brant, is very flat, and, in some places, swampy. The farmers were busy with their harvest. Most of the grain was yet in the fields, and generally indicated a fair average crop. The oats, peace, and barley were, in places, quite green, and give promise of an abundant yield. There is a large quantity of corn and potatoes grown in the section through which we passed, which also look well.—
Brantford Expositor.

The heritost is not feight on the section.

The hartest is now fairly on the way, and accounts received from all parts of the county indicate a yield of the staple crops of surpassing excellence and abundance. Agriculturists have unbounded cause for thankfulness, and little to deplor on the order of nature the present season.—Hantingdon Journal.

thankfulness, and little to deplote in the order of nature the present season.—Huntingdon Journal.

The wheat harvest in Dumfries and neighboring townships is now pretty generally over, and the crop has been secured in good order. The weather was dolightful up to Wednesday, on which day heavy rain fell; but the crop generally would be housed before that day. The harvest of oats and other spring crops will now be on immediately, and will keep our farmers busy for the next few weeks. Reports of the state of the crops along the line of the Owen Sound Road to Guelph, and through the Counties of Grey and Bruce represent the prospect as splendid. If no untoward calamity interveues, the harvest in these counties will be magnificent.—Gall Reporter.

The hay crop is about saved in this section. Many farmers are now engaged in harvesting the fall wheat. The weather has been favorable, and the quantity of hay greater than average. Fall wheat is a tolerable crop, in fact, some fields present a fine appearance. We are sorry to state that some fields of spring wheat, looking exceedingly well in other respects, have been attacked by the midge. Too much attention cannot be paid by farmers to a proper rotation of crops, as wheat grown on the same ground for years, successively, wit out proper means being adopted for the amelioration of the soil thus unnecessarily exhausted, must sometimes prove a failure—Bruce Courier.

The weather of late has been most propitious for the carrying on of farming operations, and we are pleased.

The weather of late has been most propitious for the carrying on of farming operations, and we are pleased to learn that in this section the hay has been secured in most excellent condition, and the crop is said to be good. The excessive heat of late has hurried on the wheat crop, and in the course of a week or ten days

the greater portion of the wheat crop in this county, should the weather continue favorable, will be safely housed. The spring crops will yield, to all appearance, above an average crop, and should the prices be in the neighborhood of last winter, our farmers will c.:.lainly have no just ground for complaint. Last year's good crops and prices did much to place the country in a prosperous condition, and if our anticipations of the approaching business season are not overrated, the business of the country will attain a position of prosperity never before reached. So mote it be.—Owen Sound Times.

The Kean County Although the breadth of flax

Sound Times.

The Flax Crop.—Although the breadth of flax sown this year is far from what it should be, yet a considerable crop presents itself: and what is of importance, both as to the fibre and seed, appearances are highly favorable. One gentleman, Mr. J. H. Brown, has about one thousand acres of flax, Mr Cottle has upwards of one hundred and ten, and Mr. Josiah Campbell, of North Norwich, has one hundred and twenty acres under flax. At the lowest calculation, the seed from this crop will produce \$20 per acre, and the fibre \$30, making a total, per acre, of \$50—or, on the whole, \$61,500. The pulling of this crop will be entered upon in a few days, and, if properly handled until thoroughly cured, promises to be of excellent quality, and remunerative to both grower and manufacturer.—Woodstock Times.

We have had about a fortnight of almost uninter-

quality, and remunerative to both grower and manufacturer.—Woodstock Times.

We have had about a fortnight of almost uninterripted wet weather, which must have done a good deal of damage to the hay crop, of which a good deal had been cut and unhoused. The yield, as far as we can learn, is about an average one in the Eastern Townships Corn, although backward in the spring, is now looking well; wheat, barley, and oats also promise well, if not injured by rust. Potatoes are now plenty in the market, and have been sold during the week at 75cts, to \$100 per bushel. We have not heard of the rot making its appearance, and the yield promises well.—Sherbooke Gezette.

The Weather and the Crops—During the summer we have had an unusual quantity of rafia and the weather lately has been rather unfav orable for harvest. The hay crop has not yet been all housed, and much of it has been seriously injured by the rain. As we noted fast week, the barley harvest has begun, and peas and flax are being garnered. We heard also that some one in Garafraxa had cut a field of spring wheat on Wednesday last. Aside from the wet weather, the prospects of an abundant harvest were never better.—

Feryus British Constitution.

Fergus British Constitution.

A gentleman, who has lately travelled through nearly all the townships of the counties of Grey, Perth, and Bruce, states that the prospects of an abundant harvest were never more promising than they are this stason. He remarks that during a trip of nearly 300 miles he had not seen laft a dozen fields of fall wheat which had been winter-killed, or in which the midge had made its appearance. In several localities harvesting had commenced, and the testimony of all with whom he conversed on the subject was, that if no untoward event occurred to prevent the grain from being properly housed, the yield this year would exceed anything known in Canada for the last fifteen years.—*Cuclph Mercury*.

The Crop Viewers of the Beckwith Agricultural

the grain from being properly noised, the yield this year would exceed anything known in Canada for the last fifteen years,—Guelph Mercury.

The Crop Viewers of the Beckwith Agricultural Society submitted the following report as to the result of their recent examination:—

Spring wheat is a very excellent crop this season—superior, in our opinion, to what it has been for some years past. Scotch in particular, of which a large quantity is raised, is an unusually good crop. It is invariably the best of the various kinds we examined. Fall wheat is tall, and well filled, but very little raised. We saw none, only on new land. Wheat of all kinds seems to be very little damaged by the fly. Onts, also, are a very good crop, and wiff doubtless yield much above the general average. The white, we think much superior to the black oats; not so much owing to the season, as to their being a superior crop, but very little is raised this season.

Pens are generally very good, but, owing to the season, something late. However, with favorable weather, they promise to be a very fair crop; but, on account of their lateness are yet somewhat dependent on the season. The Melintosh, which kind comprises by far the greater proportion, are much the best. The "Golden Drop," a new kind lately introduced by the Beckwith Agricultural Society, we do not think so good. The pod is short, and will not yield so well as the Melintosh pea.

Indian corn promises to be an extraordinary crop: but comparatively little has been planted.

So far as it is possible to judge at present, the potatoe crop is to be most excellent Turnips are rather an inferior crop, and not much cultivated. Carrots are a good crop, but likewise not cultivated. Carrots are a good crop, but likewise not cultivated.

The market for Crude Petroleum is rather dull at present, and prices are not as remunerative as they were last year. The Oil Springs Chronicle quotes Crude at the well \$4 to \$4.50 per barrel; surface oil, for Inbricating purposes, \$8.00 to \$9.50; and refined, 30 to 3ic per gallon.

A Mammoth Cheese.

A cheese of dimensions far exceeding anything heretofore thought of has been manufactured at Ingersoll by Messrs Ranney & Harris, and is to be exhibited at the Provincial Exhibition in Toronto. The monster is six feet eight inches in diameter, three feet in height, weighs three and a half tops, and is the product of one milking of seven thousand cows. Its quite the cheese!

MONEY MARKET.

THE Government loan now on the market, and the I uncertainty as to how much of the floating capital of the country, in the shape of special and other deposits, may be absorbed by it, render the Banks extremely cautious in granting accommodation; and, though a good deal of business is still done at the regular rate of 7 per cent., a large amount of paper is accepted only on terms much more profitable to the bank There is more demand on the street for monoy; but outside rates have not been advanced. Sterling Exchange has declined from last week's prices, and may now be quoted at 107½ to 108 for bank to day title. bille.

GOLD is firm, at an advance of 31 per cent on the price of a week ago, closing at 152. The average for the week was 1491.
