

difference of five inches in height and thirty pounds in weight; not only this, but the difference in mental and moral character of the children was remarkable.

In Western Canada today, be it said to our shame, we have our slums. We all know of the miserable little one-room shack, housing sometimes nine persons. What will this lead to? Only too well do we know.

What is our responsibility in this matter? If the medical men of this western country do their duty such a state of affairs can be done away with. Tuberculosis is curable. Certainly we know that it can even be cured in New York on a fire escape by putting the patient out on it each day in the air and sun.

The medical profession as a whole, as well as the general public, seem so indifferent, we are tempted to think, that, regardless of the knowledge, our medical men still cling to the ignorance and theory of the past. There is general apathy and the result is already shown.

Gaining steadily, the Dominion Registration act will soon be a reality, and we are very glad to print the following, passed at the recent meeting of the Alberta Medical Association at Banff.

The Koddick
Bill

Your Committee on Legislation beg leave to recommend that in the opinion of this Association it would be in the best interests of the Medical profession, not only of this Province, but of the whole Dominion, that Dominion Registration be brought about as soon as possible by the adoption of the Canada Medical Amendment Act, 1910. Carried.

So that our readers shall know the latest word and modern treatment of syphilis, we give herewith an editorial which appeared in the New York Medical Journal, August 27, 1910. This article includes a reference to a paper which appeared in the same journal, August 20, by Dr. Samuel J. Meitzer New York.

Dioxydiamidoarsenobenzol
in Syphilis
