

## § 5.—BLOWPIPE REACTIONS—(Continued).

|                                                                                                                                                             |    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| (iv) <i>Flux-colouring Metals</i> .....                                                                                                                     | 40 |
| 28, Copper ; 29, Nickel ; 30, Cobalt ; 31, Iron ; 32, Tungstenum ; 33, Molybdenum ; 34, Manganese ; 35, Chromium ; 37, Uranium ; 38, Cerium ; 39, Titanium. |    |
| (v) <i>Earth Metals</i> .....                                                                                                                               | 51 |
| 40, Tantalum (?) ; 41, Aluminium ; 42, Glucinum ; 43, Zirconium ; 44, Yttrium.                                                                              |    |
| (vi) <i>Alkaline-Earth Metals</i> .....                                                                                                                     | 54 |
| 45, Magnesium ; 46, Calcium ; 47, Strontium ; 48, Barium.                                                                                                   |    |
| (vii) <i>Alkali Metals</i> .....                                                                                                                            | 57 |
| 49, Lithium ; 50, Sodium ; 51, Potassium ; 52, Ammonium.                                                                                                    |    |

## § 6.—PLAN OF ANALYSIS.

|                                                                                    |    |
|------------------------------------------------------------------------------------|----|
| (i) Determination of the Chemical Group to which a mineral substance belongs ..... | 60 |
| (ii) Determination of the Base or Bases .....                                      | 63 |

## APPENDIX—ORIGINAL CONTRIBUTIONS TO BLOWPIPE ANALYSIS.

|                                                                                                            |    |
|------------------------------------------------------------------------------------------------------------|----|
| 1. Reaction of Manganese Salts on Baryta.....                                                              | 71 |
| 2. Detection of Baryta in the presence of Strontia .....                                                   | 71 |
| 3. Detection of Alkalies in the presence of Magnesia .....                                                 | 72 |
| 4. Method of Distinguishing the red flame of Lithium from that of Strontium .....                          | 72 |
| 5. Method of Distinguishing FeO from Fe <sup>2</sup> O <sup>3</sup> in Silicates and other compounds ..... | 73 |
| 6. Detection of Lead in presence of Bismuth.....                                                           | 74 |
| 7. Detection of Lithia in presence of Soda .....                                                           | 74 |
| 8. Action of Baryta on Titanic Acid .....                                                                  | 75 |
| 9. Detection of Manganese when present in minute quantity in mineral bodies .....                          | 75 |
| 10. The Coal Assay .....                                                                                   | 76 |
| 11. Phosphorus in Iron Wire .....                                                                          | 81 |
| 12. Detection of minute traces of Copper in Iron Pyrites and other bodies .....                            | 82 |
| 13. Detection of Antimony in tube sublimates .....                                                         | 83 |
| 14. Blowpipe reactions of Thallium .....                                                                   | 84 |
| 15. Opalescence of Silicates in Phosphor-salt .....                                                        | 86 |
| 16. Reactions of Chromium and Manganese with Carbonate of Soda .....                                       | 87 |
| 17. Detection of Cadmium in presence of Zinc in blowpipe experiments .....                                 | 88 |
| 18. Solubility of Bismuth Oxide in Carbonate of Soda before the blowpipe .....                             | 88 |
| 19. Detection of Carbonates in Blowpipe Practice .....                                                     | 89 |
| 20. Detection of Bromine in Blowpipe Experiments .....                                                     | 90 |
| 21. Blowpipe reactions of Metallic Alloys .....                                                            | 91 |
