571.

Next are were non placed Attentions and training and thence conthered for many miles. The lower part of the Sillery is undoubledly Cambridia and in the SE Lawrence River section contains characteristic (statis, Agraoits), etc., at certain posts. The bightes theods of the Sillery (Lawood do not appear in this area and the red and green alters, and toose and gries of this area are therefore all probably Cambrids. The boltes of the Siller Moundam acticitor, has so yet been dedinisely decided owing to an apparent absence of organic remains in the strate. The shares and quarkies at the base, are probably the equivalents of the Georgia strainer to Vermeen (Olsenblas comed while the strate from Freilightburg to Sweetaburg, etc., probably represent the Upper Crambria. The documbrian of this area are the alter quarkies of Malbourne und viciality, which have been worked for many years of area of great economic laportance. NOTE 5.
