

HAD BACHACHE.

Was Unable To Do House-work For Two Years

Many Women Suffer Untold Agony From Kidney Trouble.

Very often they think it is from so-called "female disease." There is less "female trouble" than they think.

Women suffer from backache, sleeplessness, nervousness, irritability and a dragging down feeling in the loins. So do men, and they do not have "female trouble."

Why, then, blame all your trouble to "female disease"?

Most of the so-called "female disorders" are no more or less than "kidney disorders," and can be easily and quickly cured by Doan's Kidney Pills.

Mrs. C. Dupuis, Bellevue Village, N.B., writes: "I was unable to do my house-work for two years on account of backache. I could not get up the stairs. Doan's Kidney Pills cured me permanently after doctors failed to even relieve the pain. I can highly recommend them to all sufferers from kidney trouble."

Price 50 cts. per box or 3 boxes for \$1.25 at all dealers or mailed direct on receipt of price by The Doan Kidney Pill Co., Toronto, Ont.

HOLSTEINS FOR SALE.

Both male and female, including my present stock bull, Cornucopia Alban De Kol, in ported.

J. A. CASKEY, MADOC, ONT.

Hans came in from his ranch, two miles this side of Olney, this week—to buy a horse.

"I've got the very thing you want," said Ike Bergman; "it's a fine road horse, five years old, sound as a quail, \$175 cash down, and he goes ten miles without stopping."

Hans threw up his hands skyward. "Not for me," he said; "not for me. I wouldn't give you five cents for him. I live eight miles from Astoria, and I'd haf to walk back two miles."

QUESTIONS AND ANSWERS. Miscellaneous.

RAISING CLYDESDALES OR PIGS, WITH NO LAND TO CULTIVATE.

I have a fine, big stable, but have no land to cultivate.

1. Would it pay me to purchase two or three Clydesdale brood mares and raise colts for selling, having to buy all my feed?

2. Would it pay me to purchase two or three brood sows and raise young pigs for selling at age of one month or so? I would like to make a business of either for a side line. J. J. M.

Ans.—1. There are many factors that enter into this question. Brood mares are available for work during almost the entire year, and, in fact, are much better at work than idle. If you are in position to have them earning money at work that is not liable to be injurious, and if you can procure food in winter and pasture in summer for mare and foal at reasonable figures, you should be able to derive a profit. A great deal would depend on the quality of the stock and the success that attends your efforts in breeding.

2. There would be less risk in the purchase of brood sows. No consideration for money-making other than from the sale of offspring would be given. While a run on pasture or green feed would be desirable, it is not indispensable. At the age of six weeks or so, the young can be sold at prices seldom lower than \$1 each and sometimes going \$2 or higher. If you are fortunate with the sows, two litters of seven to ten should be produced, or an average of, say, fifteen pigs each year from a sow. If you had pure-breds of desirable quality, much more might be made by selling the young for breeding purposes. Even at the price for ordinary grade pigs, the returns easily should leave a profit after paying for feed and labor. Considerable use can be made of the slops and waste from the kitchen, but skim milk is very desirable. Much would depend on how well the stock were handled.

DRYING OFF JERSEY HEIFER.

We have a three-year-old Jersey cow which came in January 1st, 1908, and is still giving a nice mess of milk. She is due again February 7th next. We have been told that Jersey cows should not be dried before calving. Would you advise such a course, or would her milk be good? We will be thankful for any information, as we have had no experience with Jerseys. ENQUIRER.

Ans.—The statement that Jersey cows should not be dried before calving is of a piece with a great many other misleading impressions that are generalized on the strength of a limited personal experience. There are cows in all the prominent dairy breeds which milk so persistently that it is not always safe to attempt to dry them off, and there are, perhaps, a few more such among Jerseys than among other breeds, but the majority of Jersey cows are dried off in the usual way, six weeks or two months before calving. It is much better for both cow and calf that this should be done when it can be accomplished without danger of udder troubles. The cow's milk-making machinery needs a rest, and failing this she will be less able to milk liberally in the succeeding lactation period. The calf she is carrying needs all the nourishment she is able to spare it in the last few weeks, and also needs the supply of colostrum which nature ordinarily stores up in the dam's udder awaiting parturition. If the cow is milked right through, the first milk she yields her calf will be modified from the laxative albuminous article that nature intended. Moreover, the milk yielded for four or five weeks prior to calving is not suitable for ordinary household use. Endeavor always, therefore, to dry every cow off, even if it means withholding all but straw and coarse fodder for a time, but never attempt it after a cow has commenced to "spring bag," which will probably be about a month previous to calving.

Personal To Rheumatics

I want a letter from every man and woman in Canada afflicted with Rheumatism, Lumbago or Neuralgia, giving me their name and address, so I can send each one **Free A One Dollar Bottle** of my Rheumatic Remedy. I want to convince every Rheumatic sufferer at my expense that my Rheumatic Remedy does what thousands of so-called remedies have failed to accomplish—**ACTUALLY CURES RHEUMATISM**. I know it does. I am sure of it and I want every Rheumatic sufferer to know it and be sure of it before giving me a penny profit.
