

MANY HISTORIC BATTLE CLASHES IN PICARDY

British Won Two Great Victories Near Scene of Present Fighting.

AGINCOURT AND ALSO CRECY.

Ancient French Province Produced Many Noted Names of Chivalry.

If historical associations inspire to brave deeds, the British forces in their offensive against the Germans along the Somme River should be hearkened to extraordinary acts of valor by the thought that they are fighting in Picardy, says a geo-graphic bulletin of the National Geographic Society.

This ancient province of France, now divided into four departments—the Somme, Oise, Pas-de-Calais, and Aisne—has two battlefields, whose very names quicken the pulse of Englishmen, for it was at Crecy that the Black Prince won his spurs, and Agincourt that Henry V. command-ing his yeomen with their cloth-yard bows, utterly overthrew the flower of French chivalry.

Picardy is a treasured name in ro-mantic literature and in French his-tory. It had a literature of its own in the twelfth century and its sol-diers were among the most valiant in France, being known as the Gascons of the North.

The province was a natural battle-ground for the French and English during the Hundred Years' War, for its shores extend along the North Sea and the English Channel, from the River Aa, above Calais, to a point below Dieppe. Edward III. of England, the first Prince of Wales, at that time only 16 years of age, triumphed over Philip the Valois, on this occasion the English were out-numbered four to one, and they wrought terrible havoc among the enemy, the losses of the vanquished being variously estimated at from 10,000 to 30,000. One of those who fell in this fight was the chivalrous John, King of Bohemia, who, al-though blind, led a heroic charge for his French ally. Some historians trace the Prince of Wales' crest of three ostrich feathers and the motto "Dieu et mon droit" to the battle of the Black Prince adopting them from the fallen John in memory of the event.

Henry Fifth's Great Battle Less than 20 miles north-east of Crecy is Agincourt, where English archers, nearly 70 years later, after letting fly their clouds of arrows against the heavily armored nobles, attacked them with hatchets as they floundered helplessly in mud. Five thousand Frenchmen of noble birth, including their commander, d'Albret, constable of France, fell in this battle, while the estimate of English losses was astonishingly low, some chroniclers giving only 13 men and 100 foot soldiers.

Several towns of Picardy—Amiens, Soissons, and Beauvais—owe their names to the ancient tribes which inhabited this section, known as Belgica Secunda, when the Ro-mans maintained armed camps along the valley of the Somme. In the third century Christianity was introduced, and St. Quentin, from whom the im-portant town 20 miles east of Peronne gets its name, was martyred at that time.

Picardy was the heart of Merovingian France in the fifth century for Clovis named Soissons as his capital, while Charlemagne designated Noyon as his principal city, and the lesser Castellans in turn similarly honored Laon.

By the treaty of Arras in 1435 the royal towns of the Somme Valley were ceded to Burgundy, but 42 years later, after the death of Charles the Bold, Louis XI regained them. Dur-ing his brief era of peace the province thrived as a centre of the wool-ling industry. Flemish immigrants having introduced the art.

BARON NEWBOROUGH DEAD

By Special Wire to the Courier.

London, July 20.—William Charles Wynn, fourth Baron Newborough, died last night at his London resi-dence, aged 43 years.

Residents of the Brownville sec-tion of Brooklyn are fearing a rat in-vasion because 1,000 rats in that district have been put to death with-in a week in an effort to suppress the spread of infantile paralysis.

The German Admiralty officially announced the recent raid of a Ger-man submarine on the English coast, claiming to have attacked the Sealham iron works, and the sinking of a number of British trawlers by other German undersea boats.

Catarrah Cannot be Cured with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a disease of the mucous mem-brane, and in order to cure it you must take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly upon the blood and mucous surface. Hall's Catarrh Cure is not a quack medicine. It is prescribed by one of the best phy-sicians in the country for years and is the best tonic known, combined with the best blood purifier, acting directly on the mucous surface. The perfect combi-nation of the two is what makes Hall's Catarrh Cure so successful in curing catarrh. Send for testimonials free.

HYDROGETS POWER, LINKS UP TO-DAY

Government Brings Canadian Niagara Power Co. to Terms.

WILL PROVIDE 50,000 H.-P.

Further Supply Up to the Amount Now Exported is Assured, Says Premier.

Toronto, July 20.—The Hydro-Electric Power Commission will not run short of power again for some time to come. Last night Hon. W. H. Hearst announced that arrangements had been made whereby the com-mission would secure at once from the Canadian Niagara Power Com-pany a supply of 12,500 horse power at \$12 per horsepower, with a fur-ther supply up to 50,000 horsepower available from time to time as the commission requires it. Nor will the commission have to stop when it reaches the 50,000 mark. The Prime Minister intimated that when that was exhausted the way would then be open for the commission to call for a further supply up to the amount now being exported from Ontario.

As a result of lengthy conferences between the Cabinet and Sir Adam Beck and others, with the representa-tives of the Canadian Niagara Com-pany, an agreement was reached yesterday morning. An official announce-ment of the terms of the agreement was not issued by the Prime Minister until shortly before 6 o'clock. It was as follows: "Negotiations are proceeding sat-isfactorily to provide an adequate supply of power to meet all demands upon the Hydro-Electric Power Com-mission, and I am assured there need be no cause for further anxiety upon the part of the customers of the com-mission."

"The price has been agreed upon, namely, \$12 per horsepower."

"The commission will contract at once, probably to-morrow, with the lines of the Canadian Niagara Power Company, when a block of

12,500 horse-power will be available to meet the present emergency, and the agreement will apply provide for all further requirements of the Hydro-Electric Commission. The peo-ple's system must be amply taken care of and no steps will be omitted to see that this is done."

Later, Hon. Mr. Hearst stated that the agreement would permit the Hydro-Electric Commission to call for further amounts of power up to 50,000 horse-power within the present year at the same rate as that being taken now—\$12.

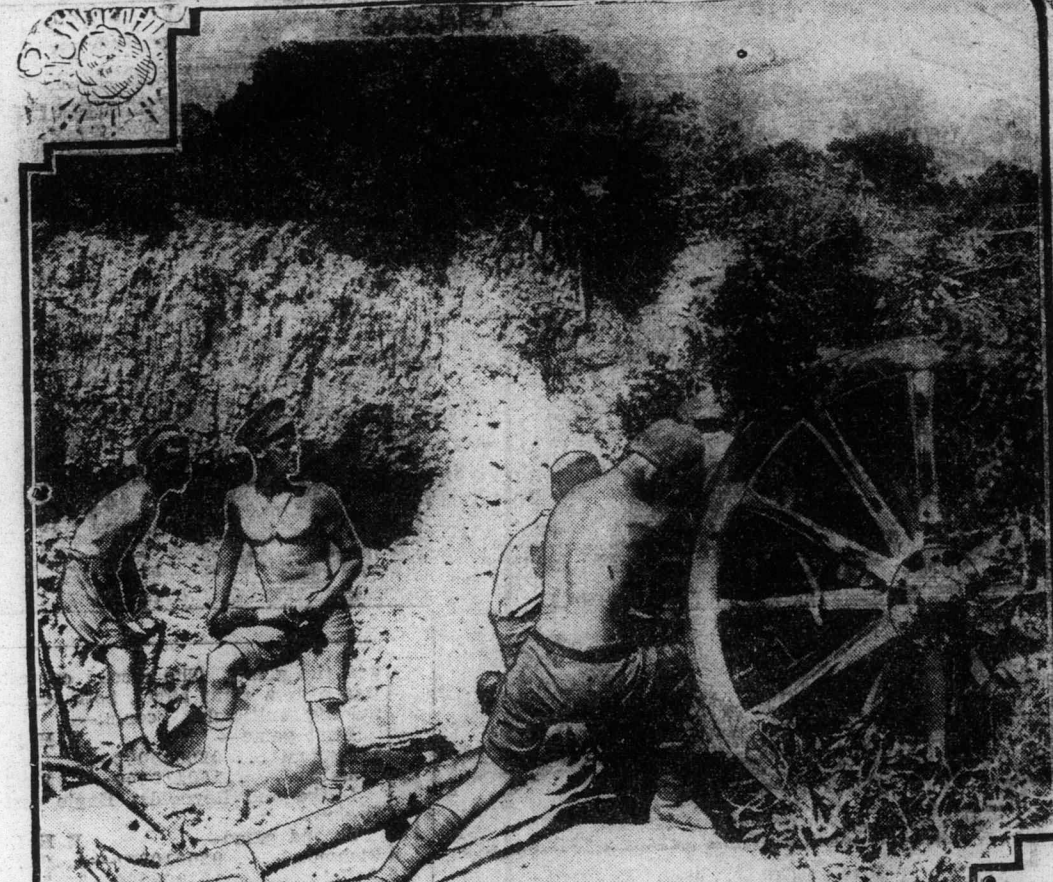

"When that amount is exhausted after the end of the year, will a further supply be available?" the Prime Minister was asked.

"There will be a supply available up to the amount now being exported from the province," he stated.

Hon. G. Howard Ferguson, who was with the Prime Minister, intimated that a further supply was as-sured through action that the Fed-eral Government would take, if nec-essary, in connection with the is-suing of licenses to export.

"When this 50,000 is used up there will be more available," he said emphatically.

The agreement to supply power was made possible by the deter-mined stand taken by the Ontario Gov-ernment in demanding and securing the support of the Federal Government. The Canadian Niagara Company fac-ing certain prohibition of export, came quickly to terms. The agree-

CANADIAN GUNS IN ACTION. A RED HOT DAY IN FLANDERS. One end of the bombardment which blew German defences to bits on the Western front and paved the way for the British advance. Gunners of the Maple Leaf stripped to the waist, serving the guns in a warm corner of the fighting. Notice the gun in a crater or dugout, and is screened with boughs.

ment represents concessions by both sides. The company, as a result of the recent conference, was ready to supply 22,000 horse-power and ul-timately 50,000, or one-half of its development, at \$15 a horse-power. Since the present power rates to municipalities in the Niagara district are based upon the purchase of power at Niagara at \$9 a horse-supply at \$15 might have meant a serious revision upward of the rates of all municipalities in the whole inside of six months, when the system was used up, it would have meant an increase of, roughly, \$2 a horse-power all round.

As it is, the municipalities may

escape any advance in their rates. It is hoped that the increased consump-tion of power will enable the com-mission to set extra profits against the larger amount that must be paid for power. For the present the com-mission's added expenditure will be \$37,500, but the current surplus is easily sufficient to meet this.

The connecting up of the Hydro lines with those of the Canadian Niagara Co. will take only a few hours. As was pointed out yesterday the commission some time ago, in expectation of receiving a supply from the company, built its lines to a point where linking up with a

small Government was possible by the determination of the Ontario Govern-ment in demanding and securing the support of the Federal Government. The Canadian Niagara Company fac-ing certain prohibition of export, came quickly to terms. The agree-

INTRODUCTION OF HOME RULE BILL DELAYED

By Special Wire to the Courier.

London, July 20.—(Montreal Ga-zette)—The Daily Chronicle's par-liamentary correspondent says: "The signs are that the new Home Rule bill will not be introduced until Thursday. In Nationalist and Liberal circles, the delay in its intro-duction is deplored. Rumors are current that it may deviate from the terms of settlement, to which John Redmond and Sir Edward Carson gave their adherence. If that should prove to be so the government is asking for trouble."

"It is said that the Unionists are pressing for the inclusion of the word 'permanent' in the bill as ap-plied to the exclusion of the six coun-ties from the sphere of the Home Rule parliament. The word is quite superfluous, for it is common ground that the excluded areas will not come within the ambit of the Irish parlia-ment except by their own consent. Moreover, no act of parliament can bind or mortgage their future in-clusion. This superfluous word 'per-manent' would, therefore, wear the appearance of a deliberate challenge to the Nationalist members."

"If the bill simply carries out the agreement arrived at, and is pushed through with alacrity, the situation may yet be saved, but the outlook is not promising. A sinister feature is the recrudescence of the old implac-able Unionist spirit in so large a sec-tion of the English Conservative party. The temper bodies ill for the future. Were the Irish settlement to be wrecked by the reactionaries, the effect on American opinion would be profound, and our difficulties at home would be greatly magnified and intensified."

How a Man's Eye and Now HELD SURGICAL

THE wounded soldier in the greatest of wars has the benefit of many wonderful inventions. Science has perfected an eye that not only can see the bullet or fragment in the body, but can also fix its exact location; which is an improvement on the formerly accepted X-ray revela-tion, marvellous as it was.

And where this newly efficient eye cannot see the telephone comes into play. Think of a bullet telephoning its location to the inquiring surgeon! But that is just what is being done. A London surgeon recently made a quick and simple demonstration with a potato serving as a subject, and our illustration shows the method.

In the old way an X-ray photo-graph would be taken of a foreign substance in a man's body, but, as in the case of a bullet or a fragment of shell, it was not sufficient to localize it for surgical purposes, inasmuch as X-rays pass through the body, and a single shadow picture gives no cer-tain knowledge of the depth to which the foreign body has penetrated, or its position in relation to other struc-tures. But the new method meets all of these points.

When the patient is on the X-ray couch the negative is placed in posi-

COUNTY CORRESPONDENT

BURFORD (From Our Own Correspondent)

Mrs. McCalm visited in Tilson-burg last week. Mrs. Handly, of Brantford, is the guest of her sister, Mrs. Silverthorne. Miss Jean Park is visiting her aunt Mrs. Haylow, at Oxford Centre. Mr. McElday has moved to the house he purchased from Mr. E. Johnston, at the west end.

Born, July 14th, to Mr. and Mrs. Gilbert Terryberry, a daughter. Miss E. Vansickle, of Brantford, is visiting her parents, Mr. and Mrs. Vansickle.

Mr. Chas. Jull is seriously ill. Mr. Emanuel Pearson had the misfor-tune to break his leg on Monday. Miss Regan, of Ancaster, is visit-ing her cousin, Mrs. Fenwick, in Brantford. Miss M. Pettie, of Toronto, is the guest of Miss Myrtle Rutherford.

Mr. Geo. M. Rutherford has pur-chased Mrs. Sharpe's house on King St. east. Miss Sadie Tapley has been visiting in Paris.

Mr. and Mrs. Morley Stuart and children, of Melville, Sask., are visit-ing Mr. H. Stuart. Mr. W. W. Robertson spent a few days last week with his mother, Mrs. M. Robertson.

Dr. W. Kem, of St. Paul, Minn., spent a few days last week at the parental home. Mr. Ira Wooden, of the Cornish House had a serious accident about four miles from Paris last Friday, when a wheel came off the car he was driving, throwing Mr. Woodin into a spin.

All business places in the village now close at 7 o'clock p.m. on Mon-days, Wednesdays and Fridays. No business will be transacted after this hour.

Mr. McCann, who has been living with his niece, Mrs. Marshall for some time, died on Tuesday of this week. Mr. McCann, who is quite an old man, has been ailing for a long time.

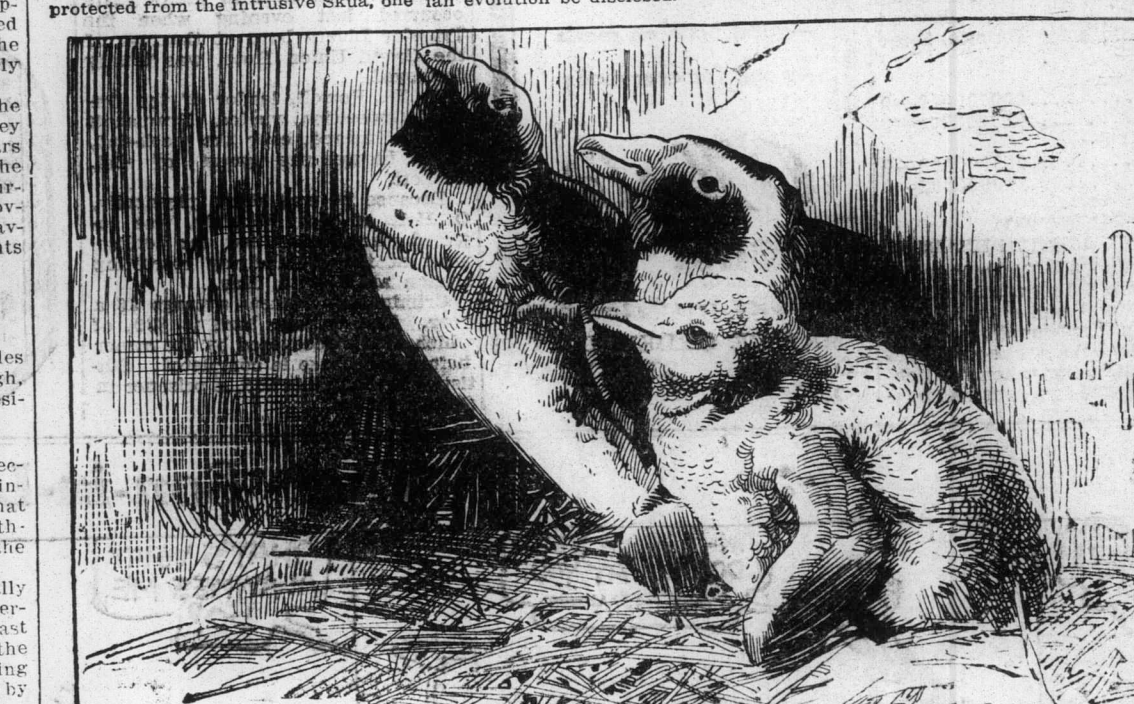

Mr. C. N. Woodin has moved into large boilers from the cars, and put them in place, at the milk drying factory.

Wonderful PENGUINS, the SWIMMING Birds, That Walk UPRIGHT and DRILL Like SOLDIERS

A STUDY of that mysterious arctic explorer, despite the fact that what is meant by 'adaptation to en-vironment.' As to their precise an-cesstry we have no certain knowl-edge. There can be no room for doubt, how-ever, but that they are the descend-ants of birds which possessed the same power of flight. This power has long since passed from them, for the wing has become transformed into a pad-dle, to serve as an organ of propul-sion under water. "The evidence of its earlier func-tion as an organ of flight is to be found partly in the skeleton and mus-culature of the adult, and partly in the study of the embryo. When work-ing out the later embryonic stages of the Adelia penguin, I brought back, I was able to show that the wing at first agrees with that of the ordinary flying birds. The bones of this arm, forearm and hand have the same cylindrical shape; the thumb is quite distinct; there are separate wrist bones, and the hand could be flexed upon the forearm. But as develop-ment proceeds the whole skeleton be-comes curiously flattened; the thumb disappears, as also do the wrist bones, save only that at what we may call the back of the wrist, which becomes excessively developed. As a result of these changes the hand can no longer

Penguins, Which Differ from All Other Living Birds in Having "Wings" That Have Become Paddles to Serve Them in the Water.

of the most rapacious of marine birds, terial can hardly fail to yield some new facts, but it is highly improbable until they can look out for themselves. Another exhibition of sociality was that they will prove very start-ling in a sort of drilling for which the Our knowledge of the early stages of the development of the penguin dates back nearly 30 years, the first contri-butions thereto having been made by "Quite a number of animals, not even remotely related, have evolved "flippers" of this kind out of limbs which originally served the purpose of supporting the body on land.
